AIGH - NURSING ADMINISTRATION

Nursing Workforce Management System

User Manual

Version V04 · application v0.1.0

How every screen works, who can do each task, what happens after you submit it, and where to go next. The same guide is in the application: side menu -> Guidelines (with search).

Every task is labelled Implemented, Partially implemented or Planned, and is checked against the application code (docs/GUIDELINES_COVERAGE.md). Screenshots are deliberately not included: the screens are described by their labels.

System overview

The AIGH Nursing Workforce system keeps one record of every nurse — contract, credentials and eligibility — and lets supervisors build rosters only from nurses who are allowed to work. Every screen shows data the server has checked; every change is recorded in the audit trail.

Labels used in this manual:

IMPLEMENTED PARTIALLY IMPLEMENTED PLANNED / NOT CURRENTLY AVAILABLE

EMPLOYEE SUPERVISOR HR ADMIN SYSTEM ADMIN

Master data is set up once and kept current; each nurse then moves from contract to credentials to eligibility, and only eligible nurses reach the roster.

1. Getting started

EMPLOYEE SUPERVISOR HR ADMIN SYSTEM ADMIN

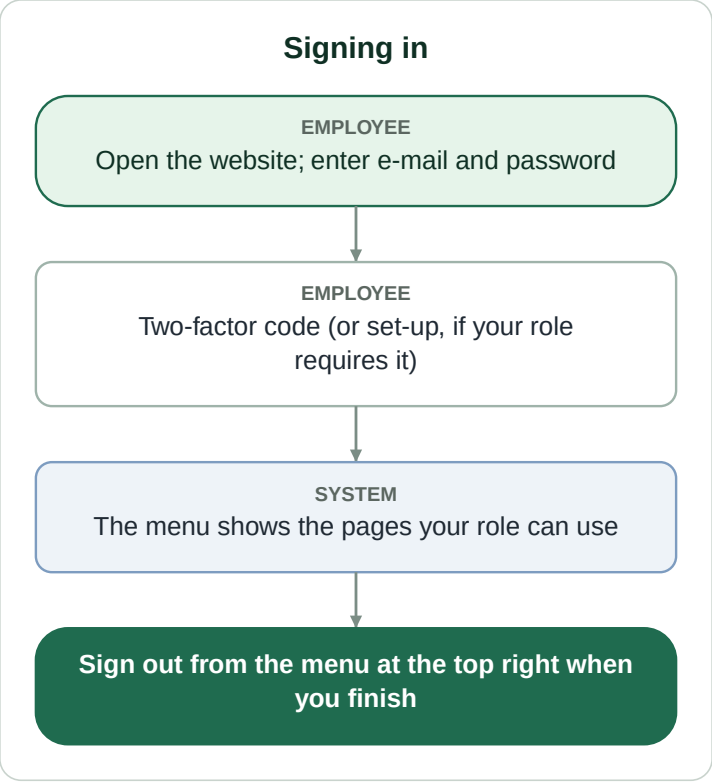

The AIGH Nursing Workforce system keeps one record of every nurse — contract, credentials and eligibility — and lets supervisors build rosters only from nurses who are allowed to work. Every screen shows data the server has checked; every change is recorded in the audit trail.

Who: Everyone

Where: Open the hospital address in Chrome, Edge or Firefox and sign in.

> Note: What you see depends on your role and scope. A menu item or button that is missing is not an error: your account has no right to it. Ask HR if you need it.

> Important: Never share your password, recovery codes or the two-factor codes from your phone. Every action is recorded under the account that did it.

The side menu

Menu item	What it is for	Who sees it
Dashboard	Welcome and system status	Everyone
Nurses	Staff master records, onboarding, login invitations	HR Admin, System Admin, Supervisor
Contracts	Employment contracts and their approval	Everyone (employees see their own)
Credentials	Licences and certificates, review queue, requirements, catalogue	HR Admin, System Admin, Supervisor
My Profile	Your own record and phone numbers	Accounts linked to an employee
My data	Your personal-data requests (PDPL)	Accounts linked to an employee
My Credentials	Your own credentials, renewals and eligibility	Accounts linked to an employee

Menu item	What it is for	Who sees it
Eligibility	Who may work today and why; emergency waivers	HR Admin, System Admin, Supervisor
Workforce	Units, beds, departments, positions, coverage targets	Everyone (changes: HR / System Admin)
Nursing KPIs	Nurse-to-bed indicators	HR Admin, System Admin, Supervisor
Roster & Scheduling	The roster board; employees see their own shifts	Everyone (drafting: Supervisor)
Attendance	Planned versus actual (clock-ins)	Everyone (employees see their own)
Notifications	Your notices — the bell at the top shows how many are unread	Everyone
Announcements	Memos, meeting schedules and seminar notices sent to you; senders write and send them here	Everyone (sending: HR Admin, Supervisor, System Admin while elevated)
Audit & Compliance	Audit trail and request log	System Admin
Sign-in history	Your own sessions	Everyone
Two-factor sign-in	Authenticator, recovery codes, sign-in e-mail, Telegram	Everyone
Nursing Administration	Accounts, roles, approvals, data protection and system tools	HR Admin, System Admin
Guidelines	This guide	Everyone

The top bar

Control	What it does
Menu button	Folds or unfolds the side menu
Bell	Opens Notifications; the number is how many are unread
Moon / bulb	Switches dark or light mode (remembered on this browser)
(Arabic) / EN	Switches Arabic or English; the layout turns right-to-left in Arabic
Your name	Your roles, Change password, Sign-in history, Two-factor sign-in, Sign out
Orange "Elevated until …"	A System Admin's temporary rights are on (see Security)

1.1 Sign in

IMPLEMENTED EMPLOYEE SUPERVISOR HR ADMIN SYSTEM ADMIN

Purpose. Open your account securely.

Who can perform it. Everyone with an account.

Before you start.

- Your sign-in e-mail and password (from HR, or chosen through an invitation link).
- For Supervisor, HR Admin and System Admin: a phone with an authenticator app (Microsoft or Google Authenticator).

Steps.

1. Open the website. Check the padlock in the address bar; never continue past a certificate warning.
2. Enter your e-mail and password and click Sign in.
3. If asked, type the 6-digit code from your authenticator app. If your role requires two-factor sign-in and it is not set up yet, the set-up screen opens first (see Security).
4. The side menu shows the pages your role can use.

System result. You are signed in. The session is listed under Sign-in history.

Approval. None.

Next step. Start from the page for your task, or search this guide.

Common problems.

- "Invalid email or password" — Check Caps Lock and the address. After 5 wrong attempts on one account within 15 minutes the account is paused for up to 15 minutes; after 20 failed attempts from one network, everyone on that network is paused. Stop guessing and use Forgot password?.
- The code is refused — Use the current code (they change every 30 seconds and each works once), or sign in with a recovery code.

Related. 18. Security and your account

Diagram: "Signing in" — page 6.

1.2 Forgotten password

IMPLEMENTED EMPLOYEE

Purpose. Choose a new password when you cannot sign in.

Who can perform it. Staff accounts (no Supervisor, HR or administrator role) reset their own. Supervisor, HR and administrator accounts are reset by HR.

Before you start.

- Access to the mailbox of your sign-in e-mail.
- E-mail must be switched on by the hospital.

Steps.

1. On the sign-in page click Forgot password?.
2. Enter the e-mail address of your account and click Send link.
3. Open the link in the e-mail within 30 minutes.
4. Enter the new password twice (12 to 72 characters) and save.

System result. The password changes and every session of the account is signed out.

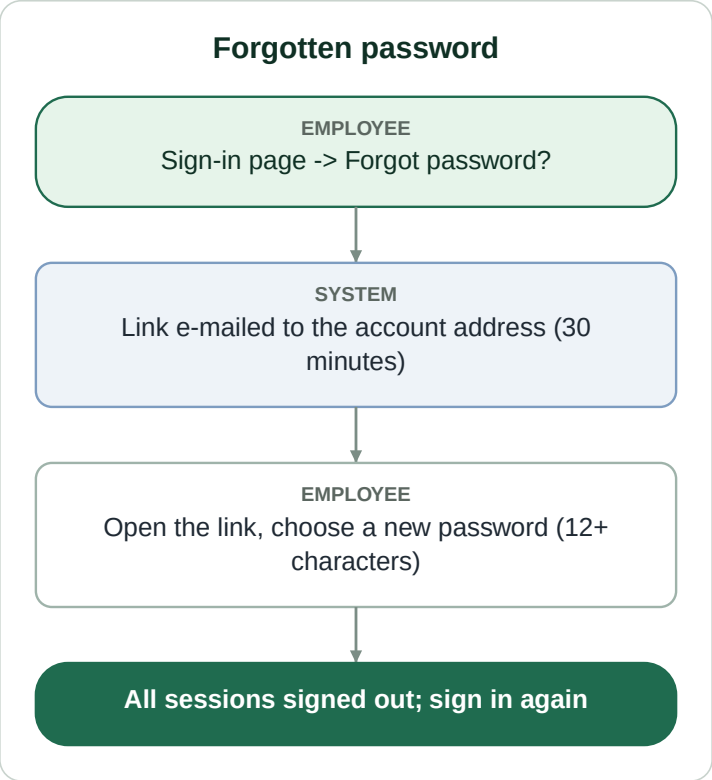

Approval. None. For any account, HR can send a reset link (valid 24 hours) from Nursing Administration -> Accounts -> Send reset link, after confirming who is asking.

Next step. Sign in with the new password.

Common problems.

- No e-mail arrives — Check the spam folder. Supervisor, HR and administrator accounts never receive a self-service link: ask HR. If e-mail is not switched on, HR helps you instead.

Related. 18. Security and your account · 15. Nursing Administration

Staff accounts only. Supervisor, HR and administrator accounts: HR sends the reset link (valid 24 hours).

1.3 Create your account from an invitation

IMPLEMENTED EMPLOYEE

Purpose. Activate your own login from the private link HR sent you.

Who can perform it. An employee who received an invitation e-mail.

Before you start.

- The invitation e-mail (the link works once and for 72 hours).
- Your Job Number.

Steps.

1. Open the link in the e-mail.
2. Enter your Job Number and continue.
3. Check the name, unit and position shown are yours (if not, stop and tell HR).
4. Enter a password of 12 to 72 characters twice and create the account.

System result. Your account is created and linked to your staff record. A newer invitation cancels the older link.

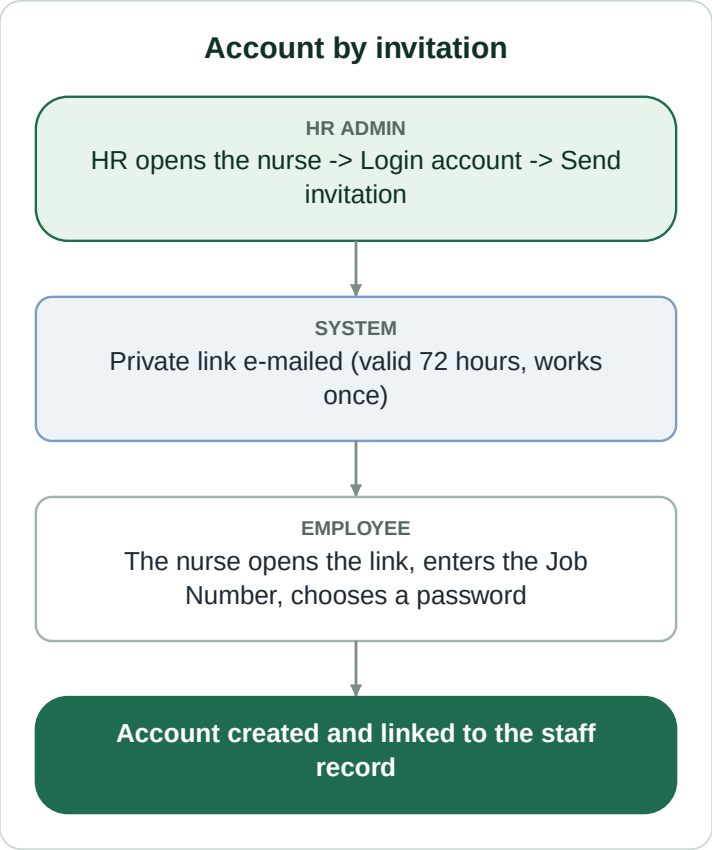

Approval. None.

Next step. Sign in. Check My Profile and My Credentials.

Common problems.

- The link says it is invalid or expired — Ask HR to send a new invitation.

Related. 5. Nurses · 17. Employee self-service

Needs e-mail switched on, an Approved or Active contract and a valid contact e-mail on the staff record.

2. Roles and permissions

EMPLOYEE SUPERVISOR HR ADMIN SYSTEM ADMIN

Every account has the Employee view of its own records. HR gives extra roles — Supervisor, HR Admin, System Admin — each limited to a scope: some units, a department, or the whole hospital. The menu and buttons follow your roles, but the server checks every request on its own.

Who: Everyone

Where: Your roles are listed under your name at the top right. The full table is in Nursing Administration -> Access matrix.

> Note: A job title or position never gives a role: a Head Nurse is a Supervisor only if HR grants the Supervisor role.

> Note: Two-factor sign-in is required for Supervisor, HR Admin and System Admin.

What each role is for

Role	Scope	Sees	Changes
Employee (every account linked to a staff record)	Own records	Own profile, contract, credentials, eligibility, shifts, clock-ins, notifications	Own phone numbers, own credentials and renewals, own personal-data requests
Supervisor	Assigned units	Nurses, contracts (reduced), credentials (compliance view, no documents), eligibility, KPI, attendance of those units	Rosters of those units; emergency waivers
HR Admin	Units, a department or hospital-wide	Everything about staff in scope	Staff records, contracts, credential decisions, requirements, accounts and roles in scope; hospital-wide HR also the catalogue and organisation
System Admin	Hospital-wide, dormant until elevated	Audit, background jobs, system tools; HR screens while elevated	System configuration while elevated (1–4 hours, with a reason)

Why something is missing or refused

You see	Usually because
A menu item is missing	Your role does not include that page (for example Audit & Compliance is System Admin only).
Nursing Administration shows only some tabs	HR Admin does not see System Admin tabs; a System Admin who has not elevated sees only the tools tabs.
A nurse is not in your list	The nurse is outside your scope (another unit or department), or the record was deleted.
A button is missing on a row	The action does not apply to that record's status, or it is your own record (nobody approves or reviews their own).
"Waiting for another administrator"	You asked for a protected change: a different administrator must approve it (see Approvals).
An error naming SCOPE, SELF or APPROVAL	The server refused the action under the rules above. Read the message; it says which rule.

3. Approvals (four-eyes)

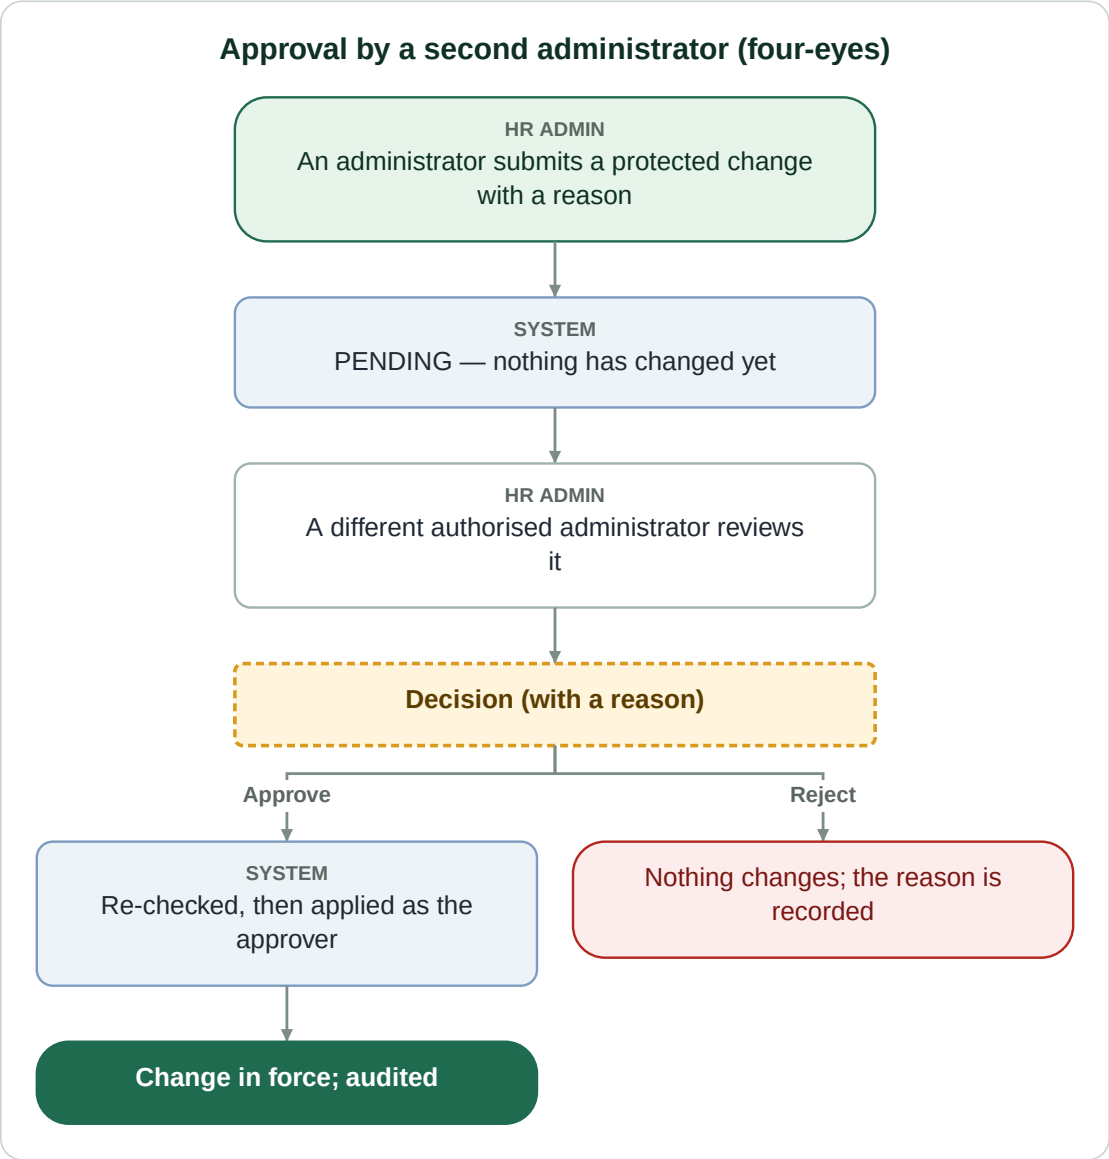

HR ADMIN SYSTEM ADMIN

Some changes are too important for one person. They are saved as a request and take effect only when a different authorised administrator approves them in Nursing Administration -> Approvals.

Who: HR Admin and System Admin

Screen: /admin (side menu)

Where: Nursing Administration -> Approvals.

Protected changes wait in Nursing Administration -> Approvals. The person who asked can withdraw the request but never approve it.

What needs a second administrator

Change	Where it is asked for	Who may approve
Granting System Admin	Role assignments	Another administrator
Granting HR Admin with hospital-wide scope	Role assignments	Another administrator
New or changed credential type	Credentials -> Catalog	Another hospital-wide administrator

Change	Where it is asked for	Who may approve
New or changed credential category	Credentials -> Categories	Another hospital-wide administrator
Hospital baseline import	Hospital baseline import	Another hospital-wide administrator
Any announcement sent by an HR Admin or System Admin	Announcements -> Send for approval	Another HR Admin or System Admin covering its audience
Approving a contract	Contracts	An HR person who did not create or submit it (not through Approvals)

3.1 Approve or reject a request

IMPLEMENTED HR ADMIN SYSTEM ADMIN

Purpose. Apply, or turn down, a protected change another administrator asked for.

Who can perform it. HR Admin or System Admin (elevated), other than the person who asked; within the request's scope.

Before you start.

- Read the description: it shows the change (before -> after) and the requester's reason.

Steps.

1. Open Nursing Administration -> Approvals.
2. Find the Pending request.
3. Click Approve or Reject.
4. Write your reason (at least 5 characters) and confirm.

System result. Approve: the server checks the change again and applies it as you, in one step. Reject: nothing changes. Both are audited.

Approval. This is the approval.

Next step. The requester sees the new status. For a role grant, the person can sign in with the new role.

Common problems.

- No Approve button, only "Your request — waiting for another administrator" — You asked for it. Someone else must decide, or you can Withdraw it.
- Approval refused because the item changed — The record changed after the request; ask the requester to submit a new one.

Related. 15. Nursing Administration · 7. Credentials

Diagram: "Approval by a second administrator (four-eyes)" — page 12.

3.2 Withdraw your own request

IMPLEMENTED HR ADMIN SYSTEM ADMIN

Purpose. Cancel a protected change you asked for while it is still pending.

Who can perform it. The administrator who submitted it.

Steps.

1. Nursing Administration -> Approvals.
2. On your Pending request click Withdraw.
3. Give a reason (at least 5 characters).

System result. The request is Withdrawn; nothing is applied. Audited.

Approval. None.

Next step. Submit a corrected request if needed.

Related. 15. Nursing Administration

4. Dashboard

EMPLOYEE SUPERVISOR HR ADMIN SYSTEM ADMIN

The first page after sign-in: a welcome line and whether the system (API) and its database are up.

Who: Everyone

Screen: / (side menu)

> Note: Workforce figures (staffing, eligibility, expiring credentials) are not on the dashboard yet. Use Eligibility, Credentials, Nursing KPIs and Notifications for them.

4.1 Check that the system is working

PARTIALLY IMPLEMENTED EMPLOYEE SUPERVISOR HR ADMIN SYSTEM ADMIN

Shows system status only; workforce figures are planned.

Purpose. See at a glance whether the application and its database answer.

Who can perform it. Everyone.

Steps.

1. Open Dashboard.
2. API status and Database status should both be green ("Up").

System result. Nothing is changed.

Approval. None.

Next step. If either is red, tell the system administrator; other pages will not load data.

Related. 20. Troubleshooting

5. Nurses

HR ADMIN SYSTEM ADMIN SUPERVISOR

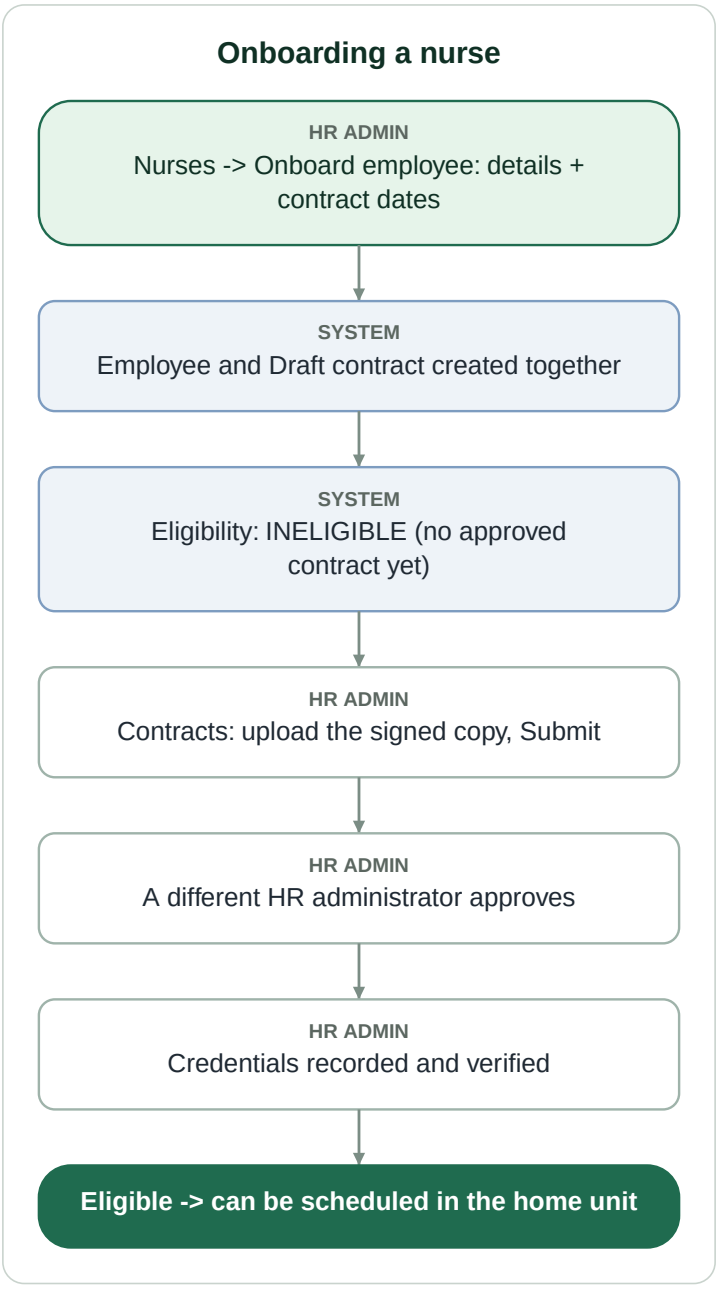

The staff master record: one row per employee with job number, name, unit, position, contact details and employment fields. Onboarding creates the record together with its first (Draft) contract. Everything else — contracts, credentials, eligibility, rosters — hangs off this record.

Who: HR Admin and System Admin (all fields, within scope); Supervisor (their units, private fields hidden)

Screen: /nurses (side menu)

Where: Side menu -> Nurses. Click a row to open the record.

> Note: A new nurse cannot be scheduled until another HR administrator approves the contract created at onboarding.

Who can change which field

Field	Who changes it	Notes
First, middle, last name	HR / System Admin	Full name is built by the system, never typed
Job number	HR / System Admin	Unique (case does not matter); no format rule
Job title, file no., marital status, salary (SAR), hire date	HR / System Admin	Hidden from supervisors: salary, marital status, nationality, rank, file number, job post location, emergency contact
Nationality	HR / System Admin	Required. Chosen from the standard list (type to search by nationality, country or code); free text is not accepted. Hidden from supervisors
Actual Work Place / Facility	HR / System Admin	Required. The hospital, chosen from the Facility master (type to search); hospital-wide administrators can open Manage Facilities beside the field. Supervisors see it
Job Post (City)	HR / System Admin	Required. Region + City, chosen in the Select Job Post Location window (region first, then a city of that region) from Workforce -> Locations; shown as "Qassim Region - Buraydah"; free text is not accepted. Hidden from supervisors
Specialty	HR / System Admin	Required. Chosen from the Nursing Specialty master (Workforce -> Specialty), in its sort order; type to search by code, name or description; free text is not accepted. Supervisors see it
Rank/Grade (SCFHS classification)	HR / System Admin	Required. Chosen in the Select Rank/Grade window from the Rank/Grade master (Workforce -> Rank/Grade); free text is not accepted. Hidden from supervisors
Unit	HR / System Admin (Edit, or right-click -> Assign)	Moving a nurse re-checks eligibility and returns invalid future shifts to Draft
Position	HR Admin (Change position); HR / elevated System Admin (right-click -> Assign)	Needs a reason; recorded from -> to; a position never gives a login role
Contact e-mail	HR / System Admin	Used for the login invitation
Mobile and emergency contact phone	HR, and the employee on My Profile	International format, e.g. +966500000000

5.1 Find and open a nurse

IMPLEMENTED HR ADMIN SYSTEM ADMIN SUPERVISOR

Purpose. Look up a staff record.

Who can perform it. HR Admin, System Admin, Supervisor — only nurses in their scope.

Steps.

1. Open Nurses.
2. Type a job number or name in the search box and press Enter, or filter by unit.
3. Click the row to open the record on the right.

System result. Nothing changes. HR sees every field; supervisors see the baseline view.

Approval. None.

Next step. Contracts, Credentials or Eligibility for the same nurse.

Common problems.

- The nurse is not listed — The nurse is outside your scope, or the record was deleted. Ask HR.

Related. 6. Contracts · 7. Credentials · 8. Eligibility

5.2 Onboard a new nurse

IMPLEMENTED HR ADMIN SYSTEM ADMIN

Purpose. Create the employee and the first contract in one step.

Who can perform it. HR Admin or System Admin, for a unit in scope (or Unassigned).

Before you start.

- Name, job number, contact e-mail, nationality, specialty, Rank/Grade (SCFHS classification), Job Post (City), Actual Work Place / Facility; the employment contract type and the contract start and end dates.
- Unit and position if known — the defaults are Unassigned and SN.

Steps.

1. Open Nurses and click Onboard employee.
2. Fill in the details and choose the Employment Contract Type. The Hijri date is shown under each contract date.
3. Choose the unit (or leave Unassigned) and the position.
4. Click Submit.

System result. The employee and a Draft contract are created together (all or nothing), audited as high priority. Eligibility is INELIGIBLE until the contract is approved.

Approval. The contract must be approved by a different HR administrator (Contracts).

Next step. Contracts: upload the signed copy and Submit. Then record credentials.

Common problems.

- The job number is refused as a duplicate — Job numbers are unique regardless of case. Search for the existing record.
- The form asks for a position — The hospital has no active SN position to default to; choose one.
- "Nationality is required." — Choose it from the list: type a few letters of the nationality (Filipino), the country (Philippines) or the code (PHL).
- "Actual Work Place / Facility is required." — Choose the hospital from the list (type part of its name). If it is missing, a hospital-wide HR Admin adds it with Manage Facilities beside the field.
- "Job Post (City) is required." — Click the field (or its search button): choose the Region / Province, then the City — Select becomes available once both are chosen.
- "Specialty is required." — Choose it from the list: type part of the name or code (ICU, NICU, NS013). If the right one is missing, a hospital-wide HR Admin adds it under Workforce -> Specialty; meanwhile Other Nursing Specialty or General / Unspecified can be chosen.
- "Rank/Grade is required." — Click the Rank/Grade field (or its search button), find the classification by code, name or meaning, and double-click it or click Select.

Related. 6. Contracts · 7. Credentials · 8. Eligibility

Diagram: "Onboarding a nurse" — page 15.

5.3 Import staff from the template

IMPLEMENTED HR ADMIN SYSTEM ADMIN

Purpose. Load many nurses at once (up to 1,000 per file) instead of onboarding them one by one. Each row becomes what Onboard employee creates: the employee and a Draft first contract.

Who can perform it. HR Admin or System Admin. Every row's unit must be in your scope; a row without a unit (Unassigned) needs hospital-wide access.

Before you start.

- The staff import template, version 3 (no Salary column). Download the current one from the import screen so its lists match the system.
- For each person: the same details as Onboard employee, chosen from the drop-down lists.

Steps.

1. Open Nurses and click Import staff.
2. Click Download the current template. Fill the Staff sheet, one person per row, choosing from the lists; the Check column must say OK on every filled row.

3. Click Choose the filled file and pick the saved .xlsx. Nothing is written yet: every row is checked and shown as New, Already there, Conflict or Problem, with what to fix.
4. If any row is a Problem or Conflict, fix it in the file and choose it again (Download the problems gives the list as CSV).
5. When every row is ready, click Import, read the confirmation and confirm.

System result. All the New people are created in one step, or none if something changed meanwhile. Each gets a Draft contract and the usual audit entry; the import itself is audited (who, how many, the file fingerprint). The file is not stored.

Approval. Each contract must be approved by a different HR administrator (Contracts), as after onboarding.

Next step. Contracts: upload each signed copy and Submit. Then send each nurse the registration invitation and record credentials.

Common problems.

- "This is template version 2" — Version 2 still has a Salary column. Download the current template and copy the rows across without salaries; salary is entered in the application only.
- Conflict: "exists with different values" — The job number belongs to someone already in the system. The import never changes existing staff: correct the row, or change the person under Nurses -> Edit.
- Problem: "Not a listed facility" (or city, unit…) — The value is not in the system any more, or the file is old. Download the current template and choose from its lists.
- Problem: "outside your assigned scope" / "Only system-wide HR can leave an employee Unassigned" — Choose a unit you cover, or ask a hospital-wide HR Admin to import those rows.
- Already there — The person exists with the same details: nothing to do. A file in which everyone is already there has nothing to import.

Related. 6. Contracts · 7. Credentials

Diagram: "Onboarding a nurse" — page 15.

5.4 Edit a staff record

IMPLEMENTED HR ADMIN SYSTEM ADMIN

Purpose. Correct or update employee details, or move a nurse to another unit.

Who can perform it. HR Admin or System Admin within scope.

Steps.

1. Open the nurse.
2. Click Edit at the top of the panel.
3. Change the fields and click Submit.

System result. Saved and audited. A unit change re-evaluates eligibility; future published shifts that are no longer valid return to Draft and the supervisors are told.

Approval. None.

Next step. Check Eligibility if the unit changed.

Common problems.

- Phone refused — Use the international format: + then country code and number, e.g. +966500000000.
- Nationality shows "not on the nationality list" — It was typed in before the list existed and matched no listed nationality. Edit the record: the old text is shown under the field; choose the matching nationality and save.
- Actual Work Place shows "not on the facility list" (e.g. "ICU Main") — Text typed in before the facility list — often the ward, which the Unit already records. Edit the record: the old text is shown under the field; choose the hospital and save.
- Job Post (City) shows "not on the location list" — Text typed in before the location list that is not exactly a listed city (e.g. "Riyadh - Al Iman Hospital"). Edit the record: the old text is shown under the field; choose the Region + City and save.
- Specialty shows "not on the specialty list" (e.g. "Surgical") — Text typed in before the specialty list that could not be matched safely (Surgical could be Medical-Surgical or Operating Room). Edit the record: the old text is shown under the field; choose the specialty and save.

- Rank/Grade shows "not on the Rank/Grade list" (e.g. "Grade 7") — A pay grade or other text typed in before the Rank/Grade master. Edit the record: the old text is shown under the field; choose the SCFHS classification and save.

Related. 8. Eligibility · 11. Roster and scheduling

5.5 Change a nurse's position

IMPLEMENTED HR ADMIN

Purpose. Record a new position (for example SN -> CN).

Who can perform it. HR Admin only (not System Admin).

Steps.

1. Open the nurse.
2. Click Change position.
3. Choose the position and write the reason.
4. Submit.

System result. Recorded from -> to with the reason. Eligibility is re-evaluated (a non-schedulable position cannot be rostered).

Approval. None.

Next step. Requirements may differ by position: check Eligibility.

Common problems.

- Refused — The position is inactive or unchanged.

Related. 9. Workforce · 8. Eligibility

5.6 Assign a unit and position from the list (right-click)

IMPLEMENTED HR ADMIN SYSTEM ADMIN

Purpose. Move a nurse to another unit, give a new position, or both, without opening the record.

Who can perform it. HR Admin, or System Admin while elevated, for a nurse whose current and new unit are both in scope.

Before you start.

- The reason, e.g. the transfer memo number.

Steps.

1. Open Nurses.
2. Right-click the nurse's row (mouse, on a desktop or laptop).
3. Choose Assign unit and position…, Assign unit… or Assign position….
4. Choose the new unit and/or position. Under each field the current value is shown.
5. Read What will change: the eligibility the nurse would have, and any published shifts that would return to Draft.
6. Write the reason (at least 10 characters) and click Assign.

System result. Unit and position change together, audited as high priority with the reason (from -> to). Eligibility is re-evaluated at once; future published shifts that no longer pass return to Draft and the supervisors are told — exactly as previewed.

Approval. None.

Next step. Roster & Scheduling, if shifts returned to Draft.

Common problems.

- Right-click shows the browser's own menu — The menu is for HR Admin, and for System Admin only while elevated. Supervisors and nurses do not have it.
- "This unit is outside your assigned scope" — Both the nurse's current unit and the new one must be in your scope. Unassigned needs hospital-wide HR.
- "The employee already has this unit and position" — Choose a different unit or position.
- You cannot change your own unit or position — Another administrator does it.

Related. 8. Eligibility · 11. Roster and scheduling

5.7 Delete a staff record

IMPLEMENTED HR ADMIN SYSTEM ADMIN

Purpose. Remove a nurse who left, keeping the history.

Who can perform it. HR Admin or System Admin within scope; never on their own record.

Steps.

1. Open the nurse.
2. Click Delete.
3. Write the reason (at least 10 characters) and confirm.

System result. A soft delete: the record leaves the lists, history stays, eligibility becomes INELIGIBLE.

Approval. None.

Next step. Deactivate the login account in Nursing Administration -> Accounts if there is one.

Related. 15. Nursing Administration

5.8 Send a login invitation

IMPLEMENTED HR ADMIN SYSTEM ADMIN

Purpose. Let the nurse create their own login with a private link.

Who can perform it. HR Admin or System Admin within scope.

Before you start.

- E-mail switched on by the hospital.
- An Approved or Active contract.
- A valid contact e-mail on the record, not used by another account.

Steps.

1. Open the nurse.
2. Scroll to Login account.
3. Click Send invitation.

System result. A private link is e-mailed (valid 72 hours, works once). A new invitation cancels the previous link.

Approval. None.

Next step. The nurse creates the account (Getting started -> Create your account from an invitation).

Common problems.

- "E-mail is not configured" — E-mail is switched off: create the account in Nursing Administration -> Accounts instead.
- "current approved or active contract" — Approve the contract first.
- "already has a login account" / "e-mail in use" — Use Accounts to manage the existing login.

Related. 1. Getting started · 15. Nursing Administration · 6. Contracts

Diagram: "Account by invitation" — page 10.

6. Contracts

HR ADMIN SYSTEM ADMIN SUPERVISOR EMPLOYEE

Employment contracts. A nurse is covered — and can be eligible — only on dates inside an Approved or Active contract. HR prepares a contract, attaches the signed copy and submits it; a different HR administrator approves it.

Who: HR Admin and System Admin (create, approve, change); Supervisor (reduced view); employees (their own)

Screen: /contracts (side menu)

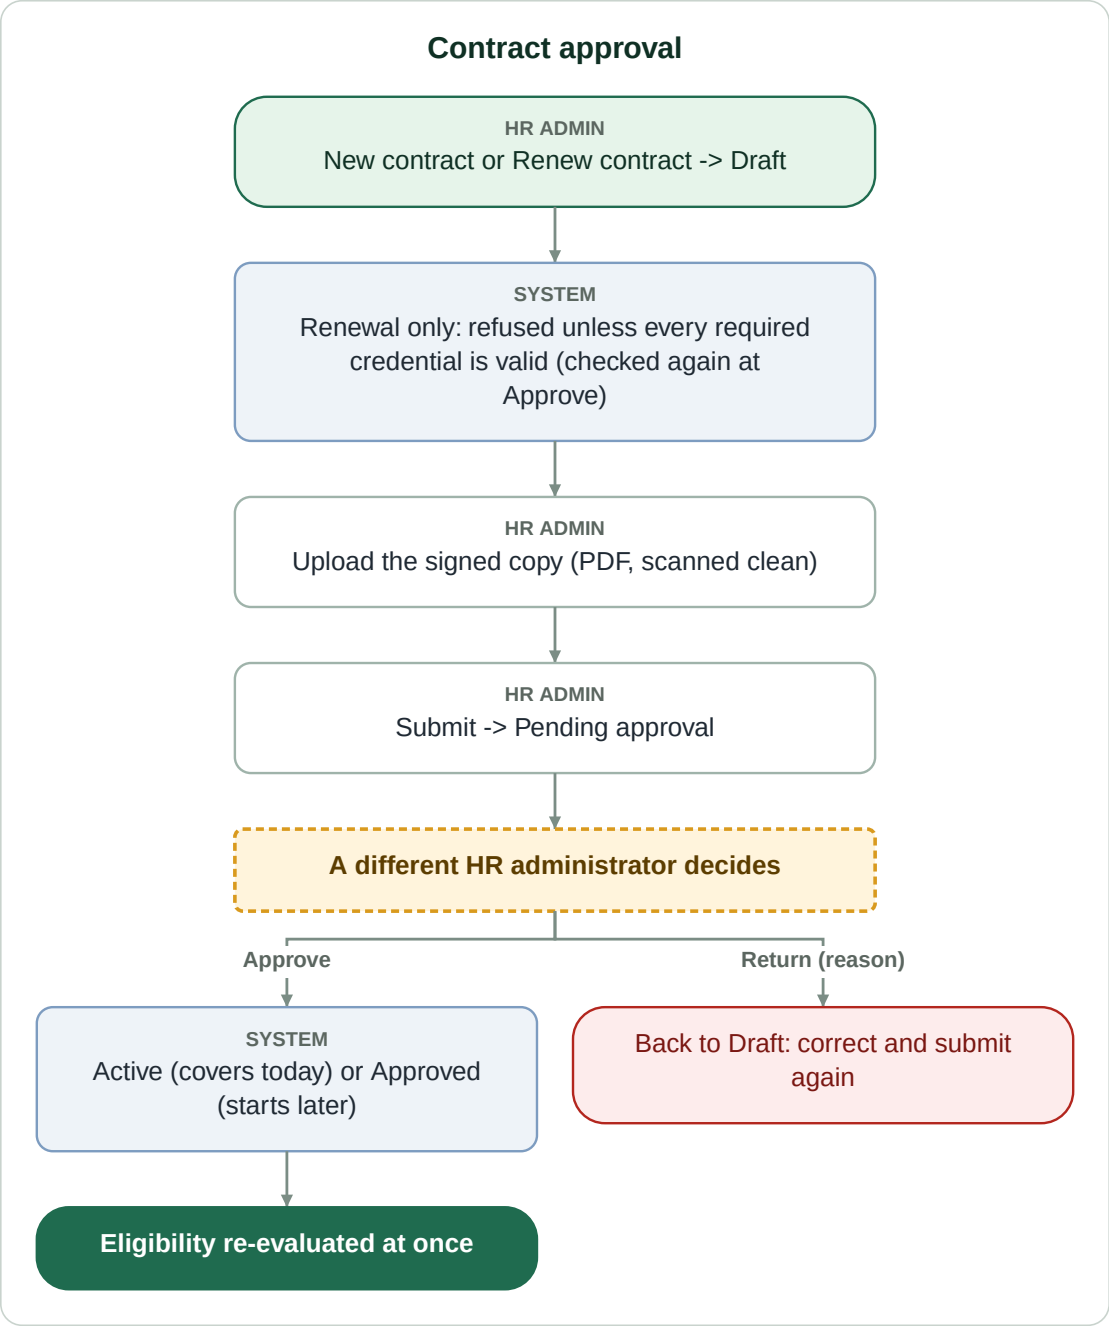

Where: Side menu -> Contracts.

Important: Nobody can create, renew, change or upload to their own contract, and nobody approves a contract they created or submitted.

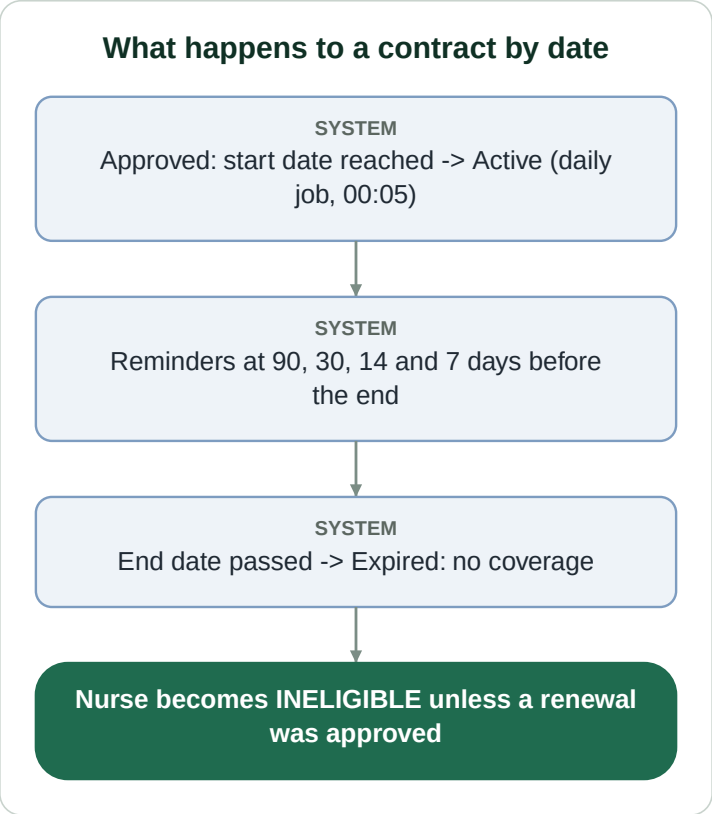

Note: Two Approved/Active periods of one nurse may never overlap. Every contract change re-evaluates the nurse's eligibility at once.

Note: The Employment Contract Type is chosen at Onboard employee, from the hospital's list (Contract types). New contracts and renewals carry the employee's previous type automatically — the forms do not ask for it; with no previous type, or one that has since been deactivated, the contract shows "Not classified". It is information only: it does not change eligibility, the renewal rule or approval.

Important: A renewal needs valid credentials. For a nurse who has had a contract before, a contract is neither created nor approved while a required credential of their unit and position is missing, expired, not yet verified, suspended or revoked. The ended contract itself does not count, so an expired contract can always be renewed once the credentials are in order. A nurse's first contract is not checked.

The creator and the submitter can never approve. Only Approved and Active contracts cover a date. A renewal needs valid credentials (the ended contract itself does not count); a first contract is not checked.

Contract statuses

Status	Covers dates?	Meaning
Draft	No	Being prepared; can be submitted once the signed copy is uploaded
Pending approval	No	Submitted; waits for a different HR administrator
Approved	Yes, from its start date	Approved for a future period
Active	Yes	Approved and covering today
Suspended	No	Paused with a reason; can be reinstated
Terminated	No	Ended early; final
Expired	No	The end date passed (set by the daily job)
Superseded	No	Replaced; never set by hand

Actions and who may take them

Action	From	Result	Rule
Submit	Draft	Pending approval	A clean signed copy (PDF) must be uploaded
Return	Pending approval	Draft	Reason required
Approve	Pending approval	Active (covers today) or Approved	Not the person who created or submitted it
Suspend	Approved, Active	Suspended	Reason required
Reinstate	Suspended	Approved or Active by date	Reason required; overlap re-checked
Terminate	Approved, Active	Terminated (final)	Reason required

6.1 Create a contract

IMPLEMENTED HR ADMIN SYSTEM ADMIN

Purpose. Give a nurse without a covering contract a new employment period.

Who can perform it. HR Admin or System Admin within scope.

Before you start.

- The start and end dates.
- The signed contract as a PDF.

Steps.

1. Open Contracts and click New contract.
2. Search the employee by job number or name (only nurses with no Approved/Active contract are offered).
3. Choose the start and end dates (the Hijri dates are shown).
4. Click Submit — the contract is saved as Draft.

System result. A Draft contract with the employee's previous Employment Contract Type (normally the one chosen at Onboard employee), or "Not classified" when there is none. It gives no coverage yet.

Approval. Approval by a different HR administrator comes after Submit.

Next step. Upload the signed copy, then Submit (next task).

Common problems.

- The employee is not offered — They already have an Approved or Active contract: use Renew contract.
- "Renew or verify these credentials before renewing the contract" — The nurse had a contract before, so this counts as a renewal: the credentials listed must be valid first (see Renew a contract).

Related. 5. Nurses · 8. Eligibility

Diagram: "Contract approval" — page 22.

6.2 Renew a contract

IMPLEMENTED HR ADMIN SYSTEM ADMIN

Purpose. Prepare the next period so the nurse stays covered without a gap.

Who can perform it. HR Admin or System Admin within scope.

Before you start.

- Every required credential of the nurse's unit and position is valid: verified, in date, not suspended or revoked (a credential in its grace period, under a waiver or in a transition period also passes). Check Eligibility: only credential reasons matter here, not the contract reason.

Steps.

1. Open Contracts and click Renew contract.
2. Choose the employee: the current contract is shown, and the dates (the day after the current end, same length) are pre-filled from it.
3. Adjust the dates if needed and Submit. The renewal keeps the current contract's Employment Contract Type.

System result. A new Draft contract for the next period. Refused with the list of credentials to renew or verify first if any required credential is not valid — checked again when the contract is approved.

Approval. After Submit, a different HR administrator approves.

Next step. Upload the copy and Submit. Once approved, the nurse gets no contract reminders for the old period.

Common problems.

- A nurse is missing from the renewal list — The list shows at most 500 employees in your scope; type to search.
- "Renew or verify these credentials before renewing the contract: …" — The nurse renews the listed credentials on My Credentials and HR verifies them (or approves the renewals); then renew the contract. A nurse with no unit is refused too, because no credential can be checked: assign the unit first.
- Approve refused with the same message — A credential expired or was suspended after the renewal was created. Bring it back in order, then approve.

Related. 8. Eligibility · 13. Notifications

Diagram: "Contract approval" — page 22.

6.3 Manage employment contract types

IMPLEMENTED HR ADMIN SYSTEM ADMIN

Purpose. Keep the list of employment contract types that HR chooses from on a new contract, a renewal or an onboarding.

Who can perform it. HR Admin or System Admin with system-wide scope (a unit-scoped HR Admin can only choose from the list).

Steps.

1. Open Contracts and click Contract types.
2. Add contract type: a code (A–Z, digits and _, at most 20 — it cannot be changed later), the English name, the Arabic name and the display order.
3. Edit: change the names or the order, or switch a type Active again.
4. Delete: confirm. A type that no contract uses is deleted; a type that contracts already use is deactivated instead.

System result. The list changes at once and every change is in the audit log. A deactivated type disappears from new contracts but stays on the contracts that use it, so old records keep their meaning.

Approval. None — the type is information only and changes no rule.

Next step. None.

Common problems.

- "Only system-wide administrators can change the employment contract types" — Your HR role covers some units only. Ask a system-wide HR Admin or a System Admin.
- Delete only deactivated the type — Contracts use it (see the Contracts column). That is intended: the old contracts keep showing it.
- A contract type code is refused as existing — Codes are unique, including deactivated types. Edit the existing type and switch it Active instead.

Related. 15. Nursing Administration

6.4 Upload the signed contract copy

IMPLEMENTED HR ADMIN SYSTEM ADMIN

Purpose. Attach the signed document; it is required before Submit.

Who can perform it. HR Admin or System Admin within scope (view: also the employee).

Steps.

1. On the contract row click Contract copy.
2. Click Upload signed copy and choose the PDF (at most 10 MB).
3. Wait until it is listed as CLEAN.

System result. A new version is stored encrypted; earlier versions are never overwritten. Files that fail the virus scan are refused.

Approval. None.

Next step. Submit the contract.

Common problems.

- Upload refused — Only PDF, at most 10 MB, and the file must pass the virus scan.

Related. 7. Credentials

6.5 Submit and approve a contract

IMPLEMENTED HR ADMIN SYSTEM ADMIN

Purpose. Move a Draft contract to Approved / Active so it covers the nurse.

Who can perform it. Submit: HR Admin or System Admin. Approve: a different HR person in scope.

Steps.

1. Person A: on the Draft row click Submit -> Pending approval.
2. Person B (did not create or submit it): open the contract copy and check it.
3. Person B: click Approve — or Return with a reason to send it back to Draft.

System result. Approve: Active if it covers today, otherwise Approved. A message shows the new status and the nurse's eligibility.

Approval. This is the approval (not through the Approvals tab).

Next step. Credentials, then Eligibility.

Common problems.

- "must be approved by a different HR administrator" — You created or submitted it. Ask another HR administrator.
- "Upload the signed contract copy" — Upload the PDF and wait for CLEAN before Submit.
- "period has already ended" / overlap — Correct the dates: periods may not overlap and must not be in the past.

Related. 8. Eligibility · 3. Approvals (four-eyes)

Diagram: "Contract approval" — page 22.

6.6 Suspend, reinstate or terminate a contract

IMPLEMENTED HR ADMIN SYSTEM ADMIN

Purpose. Stop coverage temporarily or for good.

Who can perform it. HR Admin or System Admin within scope.

Steps.

1. On the contract row click Suspend, Reinstate or Terminate.
2. Write the reason (at least 5 characters) and submit.

System result. Suspended and Terminated contracts cover nothing: the nurse becomes ineligible and invalid future shifts return to Draft. Reinstate restores Approved or Active by date.

Approval. None.

Next step. Tell the supervisor; re-staff affected shifts.

Related. 11. Roster and scheduling · 8. Eligibility

7. Credentials

HR ADMIN SYSTEM ADMIN SUPERVISOR

Licences, certificates and documents (SCFHS licence, BLS, ACLS, Iqama …) with their evidence. HR verifies them; the dates decide whether they count. The tabs also hold the review queue, the requirements per unit, and the hospital catalogue of credential types.

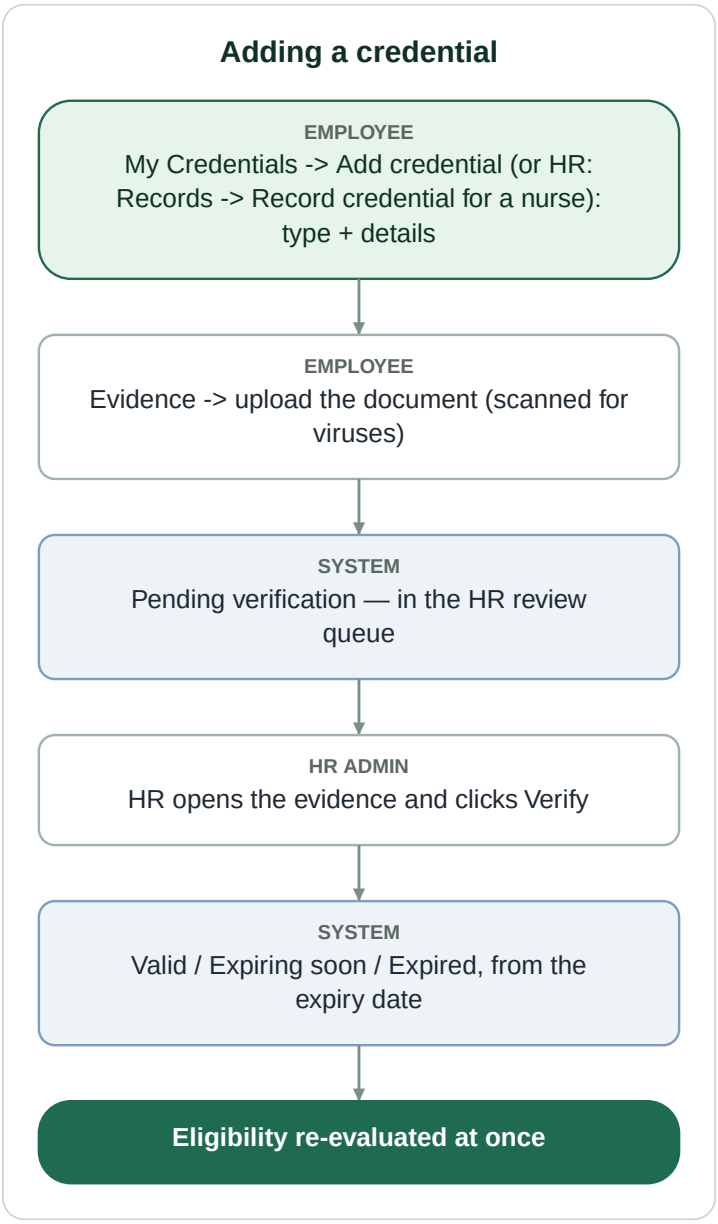

Who: HR Admin and System Admin (decisions, within scope); Supervisor (compliance view: no identity numbers, no documents)

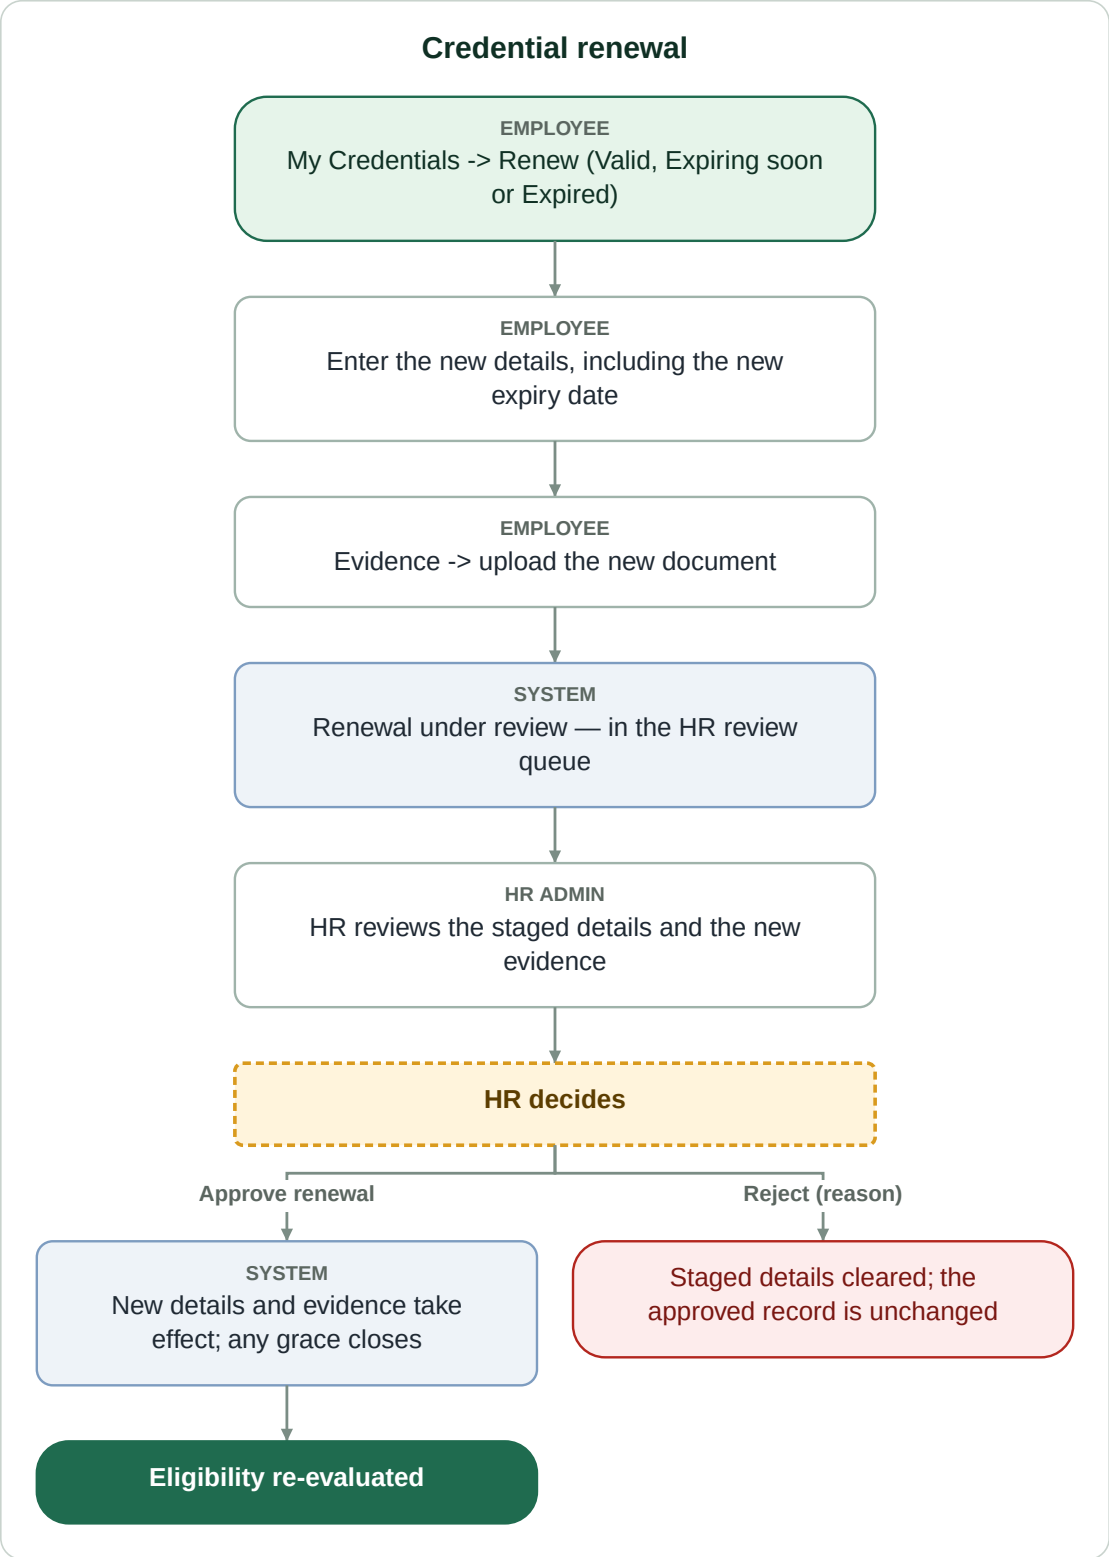

Screen: /credentials (side menu)

Where: Side menu -> Credentials. Tabs: Records, Review queue (HR), Requirements, Catalog, Categories. Nurses use My Credentials.

> Important: Nobody verifies, approves, rejects, suspends or revokes their own credential.

> Note: A credential is recorded either by the nurse on My Credentials or by HR on the nurse's behalf (Records -> Record credential for a nurse). Either way it starts Pending verification and counts only after HR verifies it.

Adding a credential
EMPLOYEE
My Credentials -> Add credential (or HR: Records -> Record credential for a nurse): type + details
EMPLOYEE
Evidence -> upload the document (scanned for viruses)
SYSTEM
Pending verification — in the HR review queue
HR ADMIN
HR opens the evidence and clicks Verify
SYSTEM
Valid / Expiring soon / Expired, from the expiry date
Eligibility re-evaluated at once

The current credential stays usable until its own expiry while the renewal is reviewed.

Credential status (stored — decides eligibility)

Status	Counts for eligibility?	Meaning
Pending verification	No	Recorded, waiting for HR to verify
Valid	Yes	Verified; more than 60 days before expiry
Expiring soon	Yes	Verified; within 60 days of expiry
Expired	No (grace may apply)	The day after the expiry date

Status	Counts for eligibility?	Meaning
Suspended	No	Stopped by HR or by an SCFHS answer
Revoked	No — final	Cancelled for good

Lifecycle label (display only — never authorises anything)

Label	Shown when
Active	Current and not near expiry
Subject to renew	Within 60 days of expiry
Renewal under review	A renewal is waiting for HR
Expired	Past its expiry

Evidence (documents)

Rule	Detail
Files	PDF, JPEG, PNG or WebP, at most 10 MB; the content is checked, not just the name
Virus scan	Every file is scanned on upload; a file that fails is refused
Versions	Each upload is a new version; nothing is overwritten
Review status	Pending review -> Approved (when HR verifies or approves a renewal) or Rejected
Who opens them	The holder and HR in scope. Supervisors never. Each view or download uses a single-use link valid 60 seconds

7.1 A. Find and read credential records

IMPLEMENTED HR ADMIN SYSTEM ADMIN SUPERVISOR

Purpose. See each nurse's credentials, their status and dates.

Who can perform it. HR Admin, System Admin, Supervisor — nurses in scope (supervisors: compliance view).

Steps.

1. Open Credentials -> Records. The list is sorted by expiry date (soonest first).
2. Read the Status tag, the lifecycle label, a gold "Grace until …" tag if grace is running, issue and expiry dates (with the Hijri expiry where recorded).
3. HR only: search by an identifier number (licence, Iqama …) with at least 3 characters. The search is recorded; the number itself is never stored or logged.

System result. Nothing changes.

Approval. None.

Next step. Review queue for work waiting; Eligibility for the effect.

Common problems.

- No Evidence / SCFHS / Verify buttons — You are a supervisor (compliance view), or the record is outside your HR scope.

Related. 8. Eligibility · 17. Employee self-service

7.2 Record a credential for a nurse

IMPLEMENTED HR ADMIN SYSTEM ADMIN

Purpose. Put a nurse's licence or certificate on record when the nurse cannot do it themselves (for example when loading a unit's staff).

Who can perform it. HR Admin and System Admin, for nurses in their scope.

Before you start.

- The nurse's staff record exists.
- The document (PDF, JPEG, PNG or WebP, at most 10 MB) and its details.

Steps.

1. Open Credentials -> Records and click Record credential for a nurse.
2. Search the nurse by job number or name, choose the credential type, fill in the fields the type asks for (with the expiry date for a type that expires) and Submit.
3. The Evidence panel opens for the new credential: Upload evidence and choose the file.

System result. "Recorded — now upload the evidence". The credential is Pending verification and appears in the Review queue; it does not count for eligibility yet.

Approval. HR verifies it on the Review queue (Verify). Nobody verifies their own credential.

Next step. Review queue -> Evidence -> Verify.

Common problems.

- The nurse is not offered — The nurse is outside your HR scope, or the search needs more of the job number or name.
- "This credential type expires: record its expiry date before verifying" — The expiry date was left empty. Record the credential again with its expiry date.

Related. 17. Employee self-service · 8. Eligibility

Diagram: "Adding a credential" — page 28.

7.3 Work the review queue

IMPLEMENTED HR ADMIN SYSTEM ADMIN

Purpose. See everything that waits for an HR decision.

Who can perform it. HR Admin and System Admin within scope.

Steps.

1. Open Credentials -> Review queue.
2. It lists credentials Pending verification, renewals waiting, and documents pending review.
3. Work each row with Evidence, then Verify or Approve / Reject renewal.

System result. Each decision re-evaluates the nurse's eligibility at once.

Approval. None (your decision is the review).

Next step. Eligibility shows the new result.

Related. 8. Eligibility

7.4 B. Open, review and upload evidence

IMPLEMENTED HR ADMIN SYSTEM ADMIN EMPLOYEE

Purpose. Check the document behind a credential, or add a newer one.

Who can perform it. HR Admin / System Admin in scope, and the holder. Never supervisors.

Steps.

1. Click Evidence on the credential row.
2. The versions are listed newest first with review status and scan status; "Current evidence" marks the approved one.
3. View or Download a CLEAN version (the link works once, for 60 seconds).
4. To add a version: Upload evidence and choose the file.

System result. An upload becomes a new version, Pending review. It is approved when HR verifies the credential or approves the renewal, and rejected otherwise.

Approval. HR review through Verify or the renewal decision.

Next step. Verify (new credential) or Approve renewal.

Common problems.

- Upload refused — PDF, JPEG, PNG or WebP, at most 10 MB; the file must pass the virus scan. A revoked credential takes no evidence.
- No View / Download button — Only CLEAN files can be opened, and only by the holder and HR.

Related. 17. Employee self-service

7.5 C. Verify a credential

IMPLEMENTED HR ADMIN SYSTEM ADMIN

Purpose. Confirm that a recorded credential is genuine so that it counts.

Who can perform it. HR Admin or System Admin in scope; never your own.

Before you start.

- The expiry date must be recorded if the type expires.
- If the type requires evidence, a CLEAN document must be uploaded.

Steps.

1. Open the credential's Evidence and compare the document with the recorded details.
2. For SCFHS-checked types, look at the SCFHS checks too.
3. Click Verify.

System result. Status becomes Valid, Expiring soon or Expired — from the expiry date, not chosen by hand. The newest clean pending document becomes the current evidence. Eligibility is re-evaluated at once.

Approval. None — the verification is the approval.

Next step. Eligibility should now show the credential as met.

Common problems.

- "requires evidence: upload a document first" — Upload the document under Evidence, then Verify.
- "record its expiry date before verifying" — The holder records the expiry; HR cannot verify without it.
- "You cannot review or decide on your own credential" — Ask another HR administrator.

Related. 8. Eligibility

Diagram: "Adding a credential" — page 28.

7.6 D. Check a licence with SCFHS

IMPLEMENTED HR ADMIN SYSTEM ADMIN

Answers come from a simulated registry until the hospital has access to the SCFHS verification service; the screen says so.

Purpose. Compare the recorded licence with what the Saudi Commission for Health Specialties reports.

Who can perform it. HR Admin or System Admin in scope, for credential types set to "Check with SCFHS".

Steps.

1. On the credential row click SCFHS (shown only for SCFHS-checked types).
2. Click Check with SCFHS now.
3. Read the answer and the history: when, trigger (on submission, nightly, on demand), SCFHS answer, details, action taken.

System result. Matches: nothing to do. Differs or not found: HR is notified. Suspended / revoked by SCFHS: HR is notified, and if the type is set to "Suspend on adverse SCFHS status" the credential is suspended at once. Unreachable: logged — try later. SCFHS never overwrites the record.

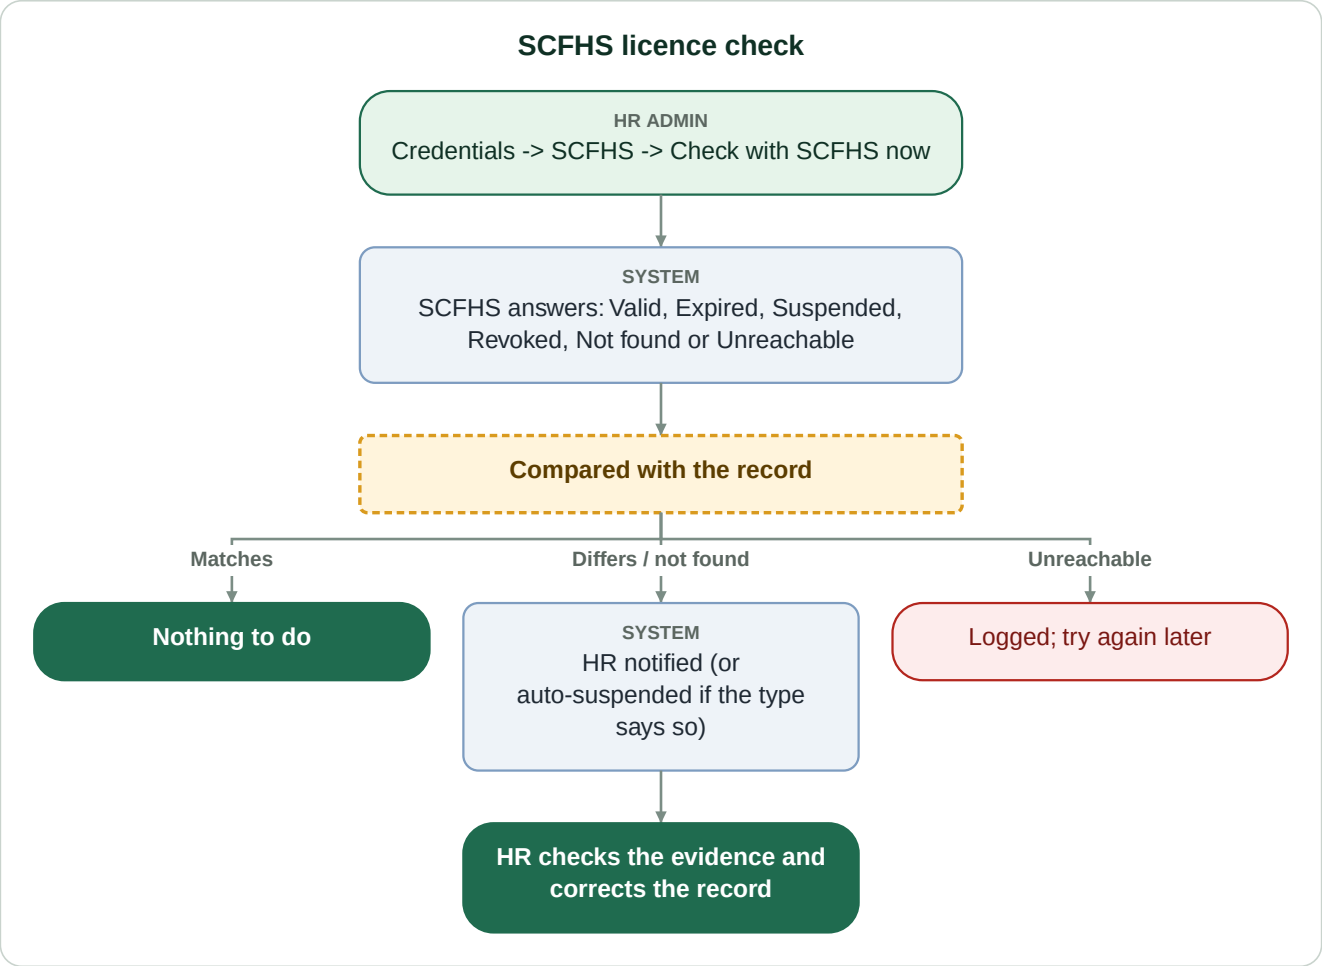

Approval. None.

Next step. If it differs, check the evidence and correct the record (or suspend it). Revoking is always an HR decision.

Common problems.

- No SCFHS button — The credential type is not set to "Check with SCFHS" (Catalog).

Related. 8. Eligibility · 15. Nursing Administration

For credential types set to "Check with SCFHS": on submission, nightly at 05:00, and on demand. SCFHS never overwrites the record.

7.7 E. Renew a credential

IMPLEMENTED EMPLOYEE HR ADMIN SYSTEM ADMIN

Purpose. Replace a credential's details and document with the renewed ones, before or after expiry.

Who can perform it. The holder submits (My Credentials). HR Admin / System Admin in scope approves or rejects — never their own.

Before you start.

- The renewed details, including the new expiry date.
- The new document (PDF or image).

Steps.

1. Holder: My Credentials -> Renew on the credential (offered when it is Valid, Expiring soon or Expired and no renewal is waiting).
2. Holder: enter the renewed details and Submit.
3. Holder: click Evidence and upload the new document.
4. The credential shows "Renewal under review"; the current one stays usable until its own expiry.
5. HR: Credentials -> Review queue -> Evidence to check the new document.
6. HR: Approve renewal — or Reject renewal with a reason.

System result. Approve: the new details and document take effect, the status follows the new expiry date, any grace period closes. Reject: the staged details and the pending document are cleared; the approved credential is unchanged and any grace ends at once. Eligibility is re-evaluated either way.

Approval. HR approval of the renewal (no second administrator).

Next step. Eligibility re-evaluates; the holder sees the result on My Credentials.

Common problems.

- No Renew button — The credential is Pending verification, Suspended or Revoked, or a renewal is already waiting.
- "A renewal must state the new expiry date" — Enter the new expiry date in the details.
- Approve refused: evidence required — The holder (or HR) uploads the new document first.

Related. 8. Eligibility · 13. Notifications · 11. Roster and scheduling · 17. Employee self-service

Diagram: "Credential renewal" — page 29.

7.8 F. Suspend a credential

PARTIALLY IMPLEMENTED HR ADMIN SYSTEM ADMIN

Suspending works. Lifting a suspension is not available in V04: the nurse records a new credential, which HR verifies.

Purpose. Stop a credential from counting at once (for example during an investigation).

Who can perform it. HR Admin or System Admin in scope; never their own. SCFHS can also suspend automatically for types set that way.

Steps.

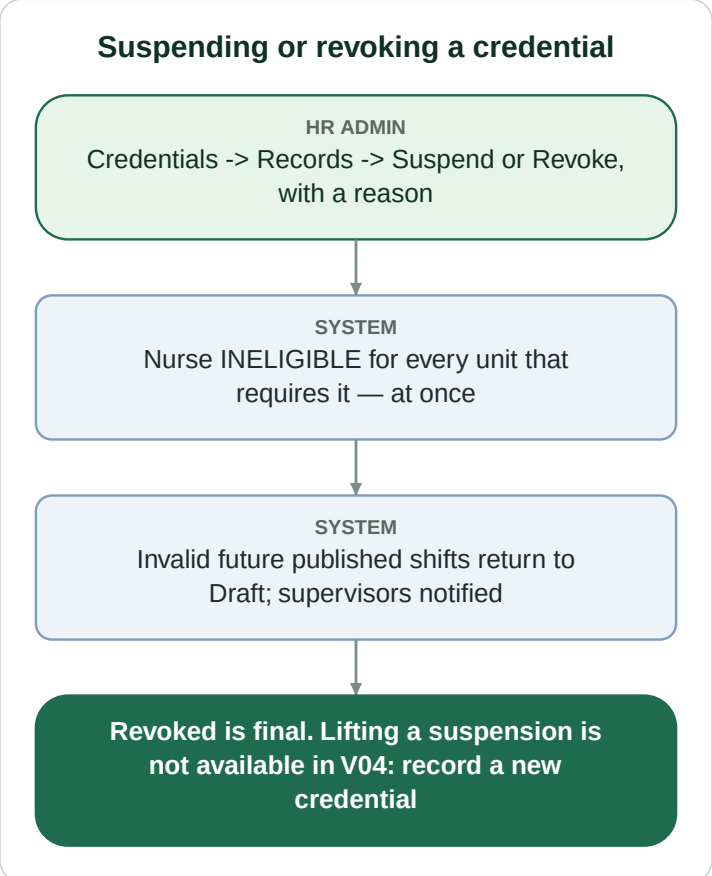

1. On the credential row click Suspend.
2. Write the reason and submit.

System result. Status Suspended, audited as high priority; any grace ends. The nurse is INELIGIBLE wherever the credential is required, and future published shifts that are no longer valid return to Draft with the supervisors notified.

Approval. None.

Next step. Tell the supervisor; record a new credential when the matter is resolved.

Related. 8. Eligibility · 11. Roster and scheduling

7.9 G. Revoke a credential

IMPLEMENTED HR ADMIN SYSTEM ADMIN

Purpose. Cancel a credential for good (for example a false document).

Who can perform it. HR Admin or System Admin in scope; never their own. Never automatic.

Steps.

1. On the credential row click Revoke.
2. Write the reason and submit.

System result. Status Revoked — final: it can never change, take evidence or be renewed. Same eligibility and roster effects as a suspension.

Approval. None.

Next step. A valid credential must be recorded as a new one.

Related. 8. Eligibility · 11. Roster and scheduling

Diagram: "Suspending or revoking a credential" — page 34.

7.10 H. Configure credential requirements

IMPLEMENTED HR ADMIN SYSTEM ADMIN

Purpose. Say which credentials a unit (or a position in it) requires: Unit + optional Position + Credential type + Policy = Requirement.

Who can perform it. HR Admin or System Admin with the unit in scope. Supervisors read the requirements of their units.

Before you start.

- The hospital's decision on what the unit requires. The system does not define clinical policy.

Steps.

1. Credentials -> Requirements -> Add requirement.
2. Unit: the unit it applies to.
3. Position: one position, or leave blank for every position in the unit. A position-specific rule overrides the unit-wide one for the same type.
4. Credential: the type required.
5. Policy: MANDATORY (missing -> ineligible), TRANSITION (warning until the deadline, then blocks — enter the deadline), or OPTIONAL (never affects eligibility).
6. Click Create.

System result. Applies at once: every affected nurse is re-evaluated in the same step; the message says how many. A new TRANSITION requirement notifies the nurses affected. A type limited by nationality (Catalog -> Applies to) is optional for the nurses it does not apply to — e.g. Passport and Iqama for Saudi nationals, National ID for everyone else — so the same unit rule can list all three.

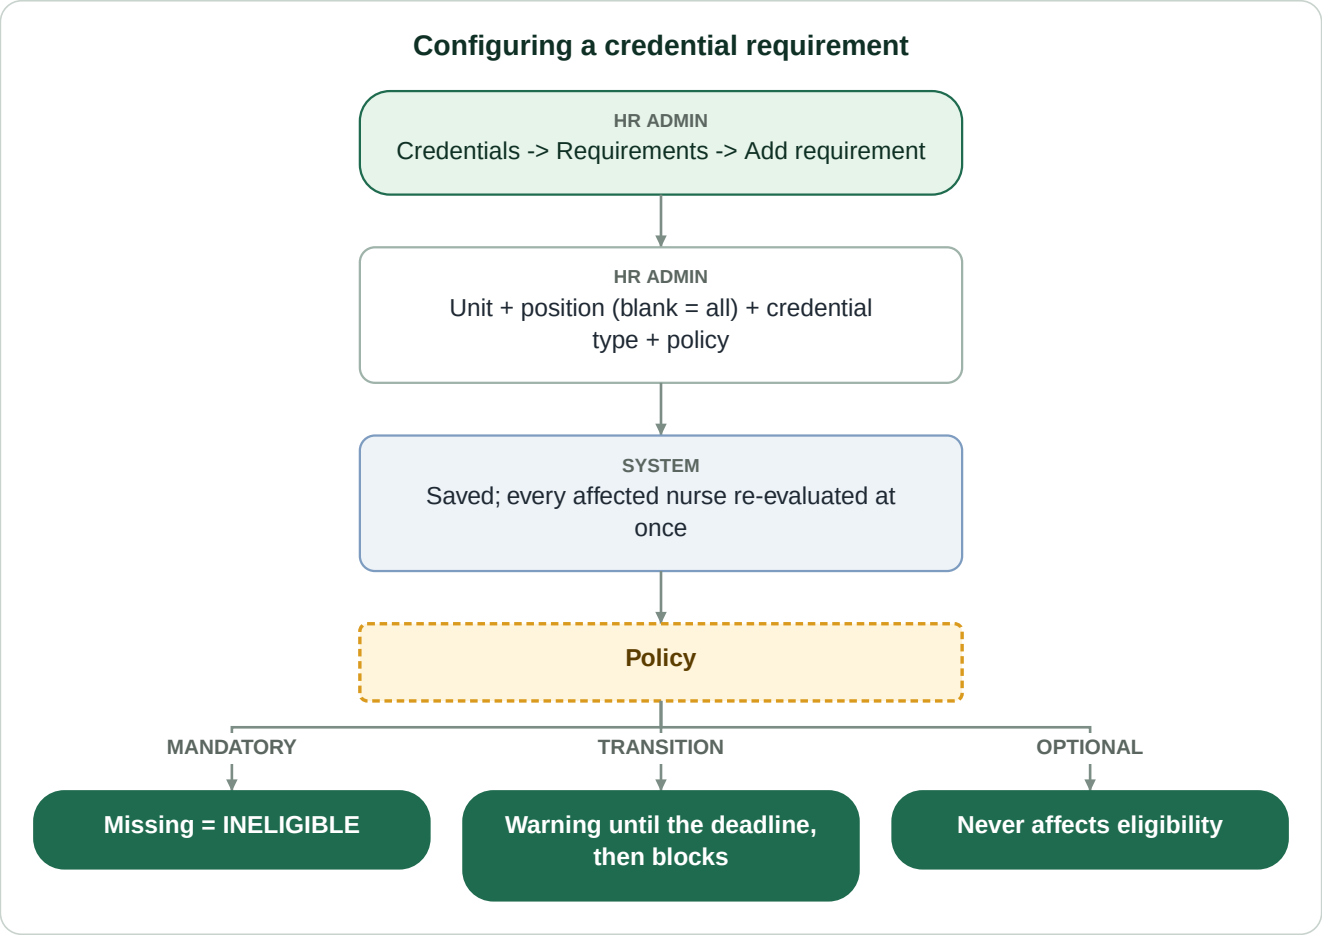

Approval. None.

Next step. Check Eligibility for the unit; nurses see what they are missing on My Credentials.

Common problems.

- Need to change a requirement — On screen: Delete it and add it again. (Editing in place exists in the API only.)

Related. 8. Eligibility · 9. Workforce

7.11 I. Manage credential categories

IMPLEMENTED HR ADMIN SYSTEM ADMIN

Purpose. Group credential types (licence, life support, training …).

Who can perform it. Hospital-wide HR Admin or System Admin; approved by another hospital-wide administrator.

Steps.

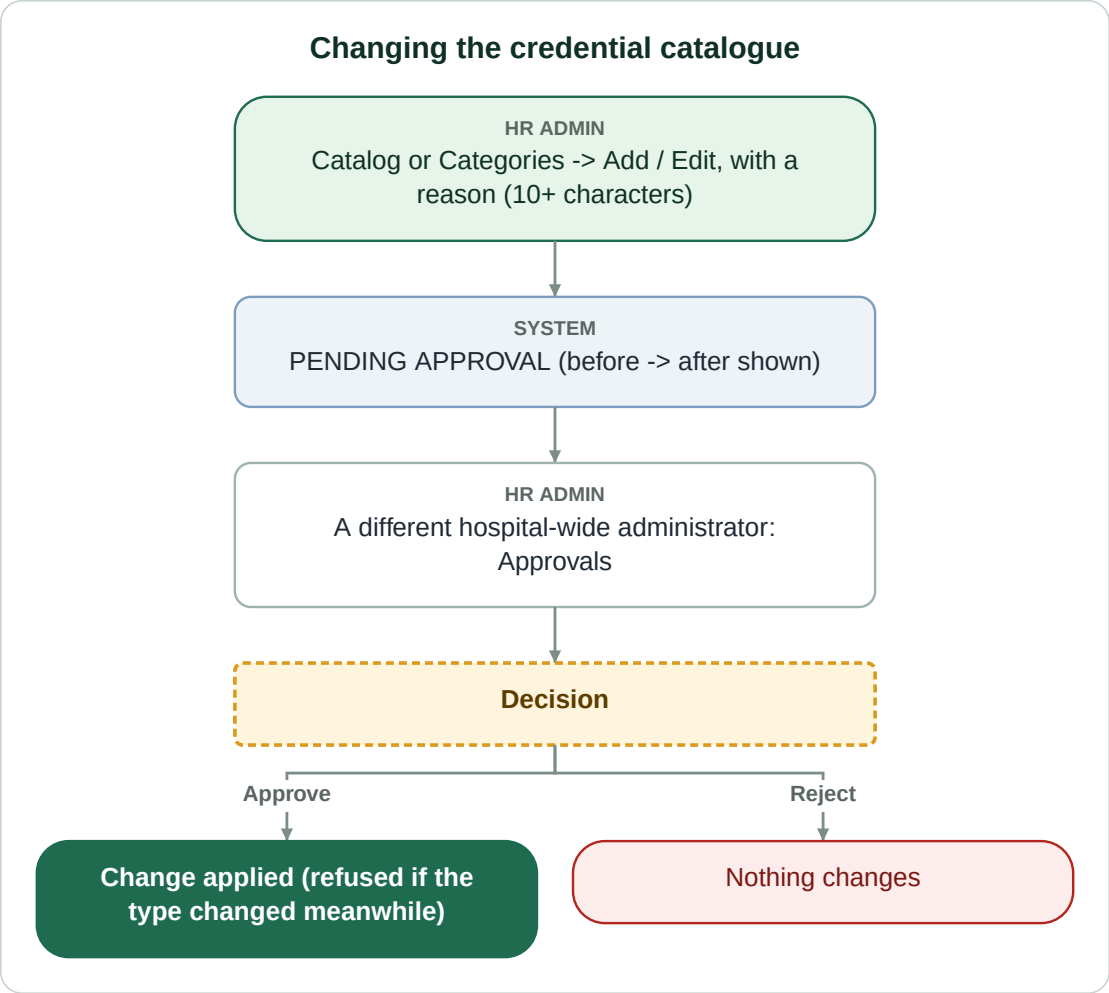

1. Credentials -> Categories -> Add category (or Edit).
2. Code (capitals, e.g. LIFE_SUPPORT), name, description, display order (lower comes first).
3. Reason — at least 10 characters.
4. Submit.

System result. "Submitted for approval — a second administrator must approve it (request #…)". Nothing changes until it is approved.

Approval. Four-eyes: a different hospital-wide administrator in Approvals.

Next step. Approvals.

Related. 3. Approvals (four-eyes)

7.12 J. Manage the credential catalogue (types)

IMPLEMENTED HR ADMIN SYSTEM ADMIN

Purpose. Define a credential type: what is recorded, whether it expires, its grace period and SCFHS checking.

Who can perform it. Hospital-wide HR Admin or System Admin; approved by another hospital-wide administrator.

Steps.

1. Credentials -> Catalog -> Add credential type (or Edit).
2. Code, name, name in Arabic (shown in the Arabic interface; the English name when empty), category, description.
3. Has an expiry date; Evidence upload required; Grace days (0–90); display order; Active.
4. Check with SCFHS (needs a field with the SCFHS registration data category) and, optionally, Suspend on adverse SCFHS status.
5. Applies to: Every nationality; Only these nationalities; or Every nationality except these — then choose the nationalities. For a nurse it does not apply to, the type is optional: it can be submitted but never makes them ineligible. A nurse whose nationality is not on the list counts as none of the listed ones.
6. Fields: key, label, label in Arabic, type, required; mark one date field as the Issue date and one as the Expiry date; mark identity numbers as sensitive (encrypted). Order them with up down.
7. Reason — at least 10 characters. Submit.

System result. A request with the change shown before -> after. Field changes affect new entries only; recorded values are kept.

Approval. Four-eyes: a different hospital-wide administrator approves in Approvals; refused if the type changed after the request.

Next step. Approvals; then Requirements can use the type.

Common problems.

- Grace days — Grace days are hospital policy, set from the credential requirements matrix: Passport 90; Iqama, National ID and Hospital ID 30; Employment Contract and Staff Clearance 0; every other type 60. Grace applies only when a renewal is in progress.
- "Choose at least one nationality" — Only and Except need one nationality or more; choose Every nationality to remove the limit.

Related. 3. Approvals (four-eyes) · 8. Eligibility

Diagram: "Changing the credential catalogue" — page 37.

7.13 HR records a credential for a nurse

PARTIALLY IMPLEMENTED HR ADMIN SYSTEM ADMIN

Available in the API (POST /credentials) but not on the Credentials screen yet.

Purpose. Enter a credential on the nurse's behalf.

Who can perform it. HR Admin or System Admin in scope.

Steps.

1. On screen today: ask the nurse to add it under My Credentials (or sign in with the nurse present).

System result. The credential starts as Pending verification.

Approval. HR verifies it.

Next step. Verify.

Related. 17. Employee self-service

8. Eligibility

HR ADMIN SYSTEM ADMIN SUPERVISOR

The workforce and clinical gate: for every nurse, whether they may work today and every reason why or why not. It is recalculated whenever a fact changes and every day; the roster checks it again for each shift date.

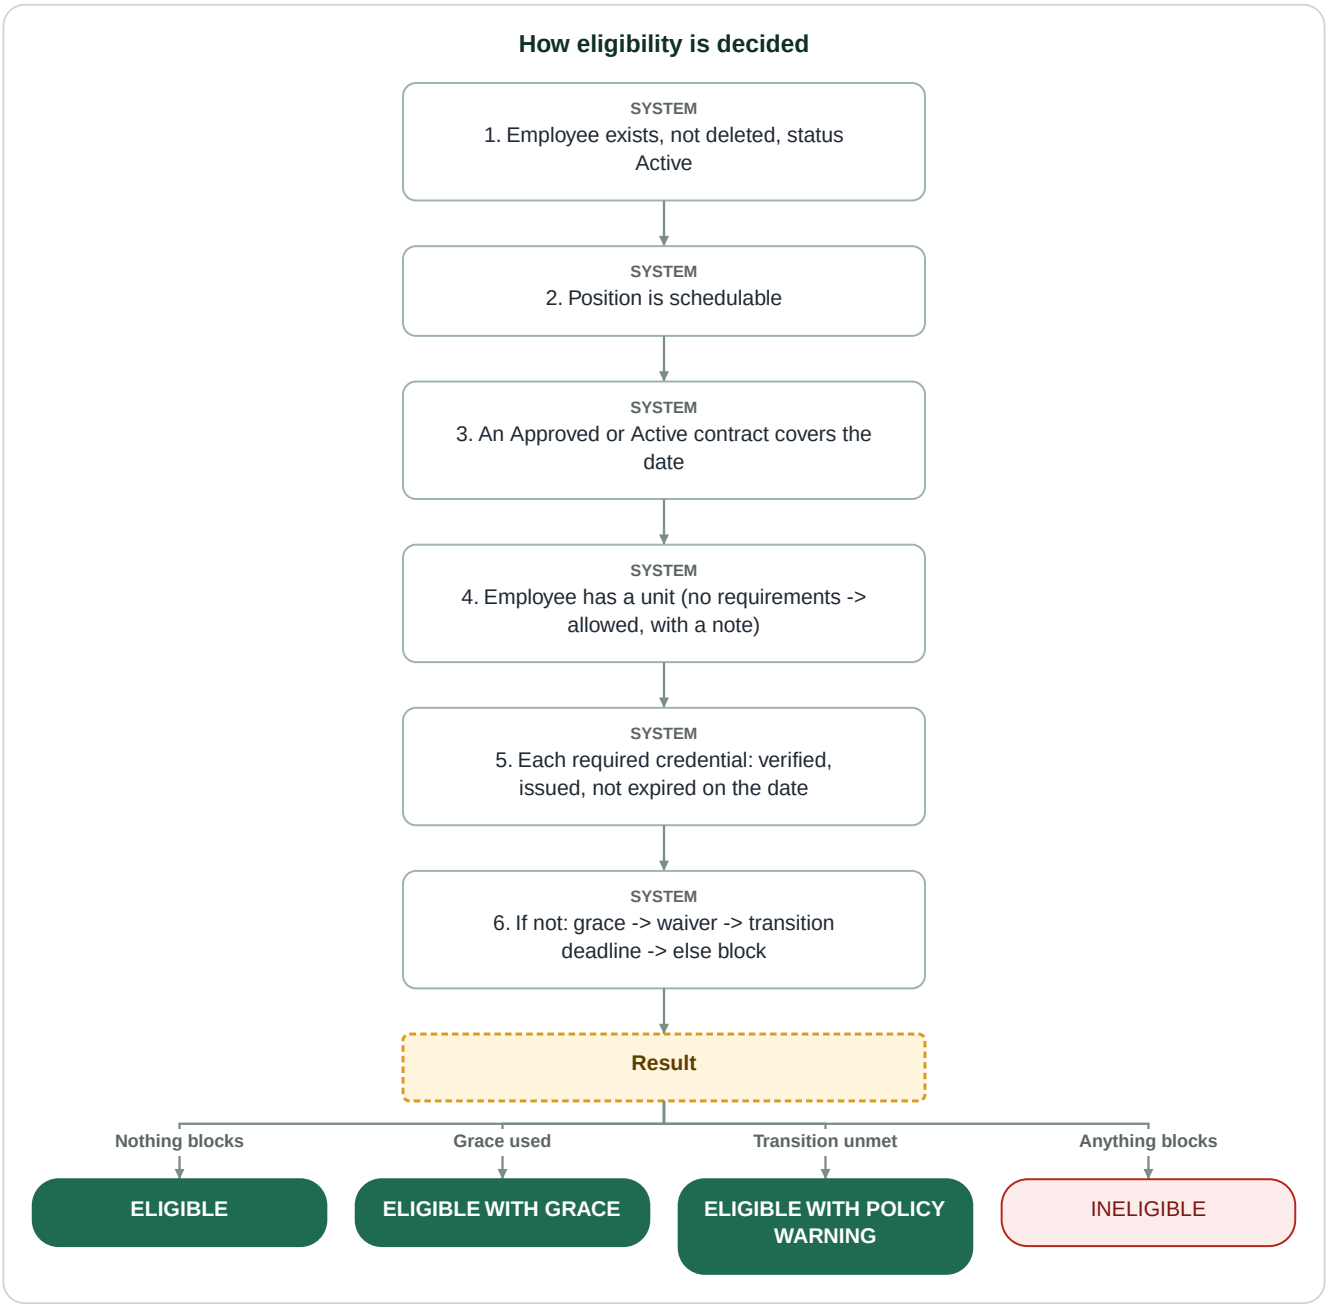

Who: HR Admin, System Admin, Supervisor (within scope); each nurse sees their own on My Credentials

Screen: /eligibility (side menu)

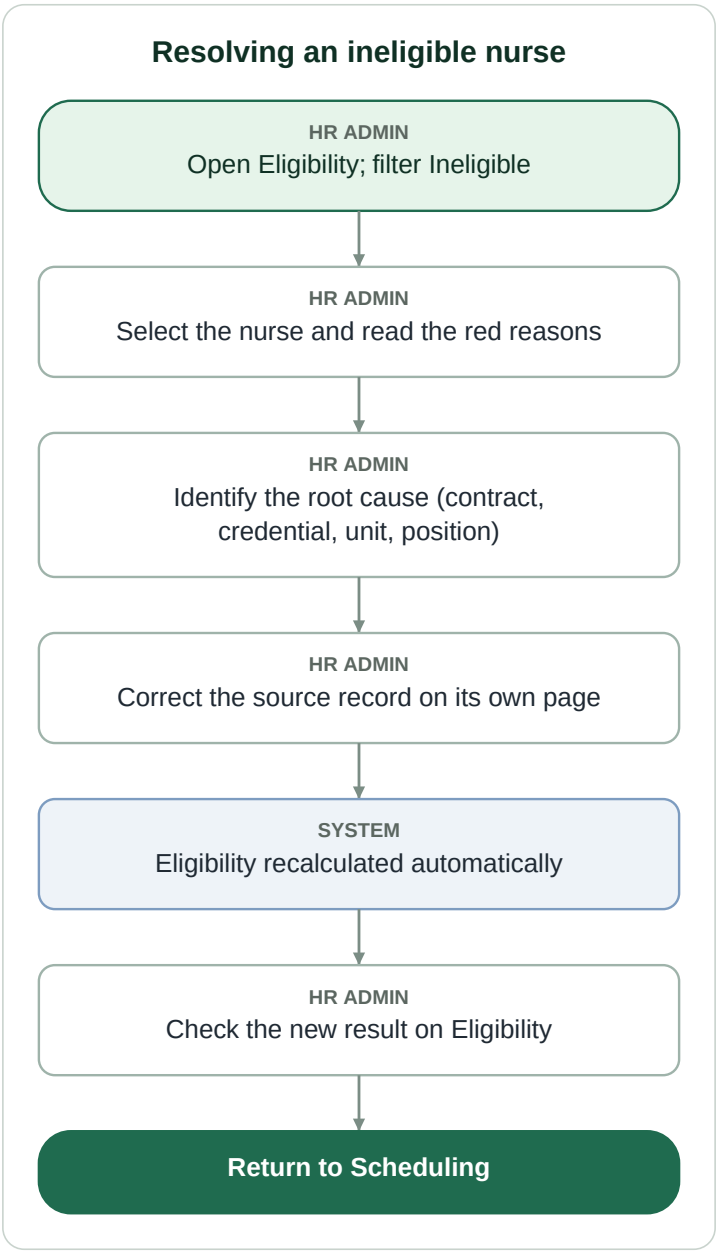

Where: Side menu -> Eligibility. Filter by outcome at the top; waivers are listed below.

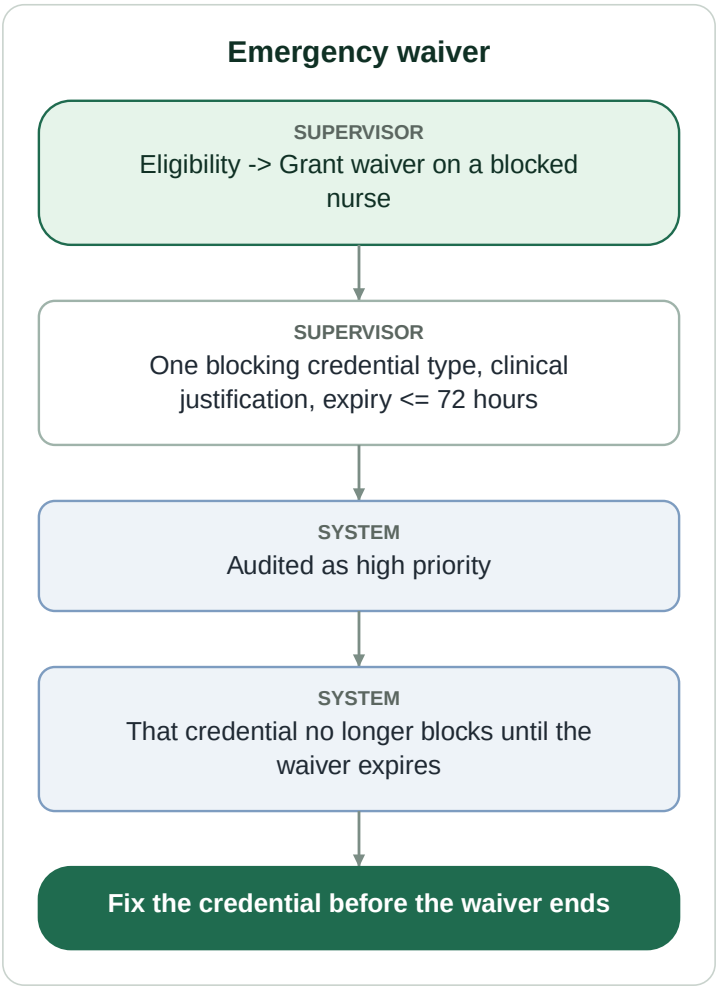

> Note: Red reasons block, amber ones warn, grey ones are notes. Hover a reason to read its full message.

> Important: A unit with no requirements configured shows ELIGIBLE with a note: nothing was checked. That is a policy gap for HR to close, not a clean result.

Checked in this order for the date asked about. The first failures block; everything is listed as a reason.

Outcomes

Outcome	Meaning	Scheduling	What to do
ELIGIBLE	Nothing blocks	Can be rostered	Nothing
ELIGIBLE WITH GRACE	An expired credential is accepted in its grace window because a renewal is in progress	Can be rostered; reliance is recorded	HR decides the renewal before grace ends
ELIGIBLE WITH POLICY WARNING	A TRANSITION requirement is unmet before its deadline	Can be rostered until the deadline	Obtain the credential before the deadline
INELIGIBLE	At least one blocking reason	Cannot be published; stays Draft	Fix each red reason

Reasons and how to fix them

Reason code	Means	Fix it in
EMPLOYEE_NOT_FOUND / EMPLOYEE_DELETED	The record does not exist or was deleted	Nurses
EMPLOYEE_NOT_ACTIVE	The employee status is not Active	No screen changes the status in V04: tell the system administrator
POSITION_NOT_SCHEDULABLE	The position cannot be rostered (e.g. DON, DEPUTY_DON, ADMIN)	Nurses -> Change position, or Workforce -> Positions
NO_CONTRACT_COVERAGE	No Approved or Active contract covers the date	Contracts: approve, renew or reinstate
UNIT_NOT_ASSIGNED	The nurse has no unit, so no rules can be applied	Nurses -> Edit -> Unit

Reason code	Means	Fix it in
CREDENTIAL_MISSING	A required credential is not on record	My Credentials (nurse adds it), then Verify
CREDENTIAL_NOT_VERIFIED	Recorded but not verified	Credentials -> Verify
CREDENTIAL_EXPIRED	Past its expiry (the expiry date is the last valid day)	Renewal
CREDENTIAL_NOT_YET_ISSUED	Issued after the date checked	Check the dates
CREDENTIAL_EXPIRY_UNKNOWN	An expiring type without an expiry date	Correct the record (renewal with the date)
CREDENTIAL_SUSPENDED / CREDENTIAL_REVOKED	Stopped by HR or SCFHS	Credentials (a new credential if needed)
POLICY_TRANSITION_WARNING (amber)	Transition requirement unmet; blocks after the deadline	Obtain the credential
GRACE_ACTIVE (amber)	Relying on a grace period	Decide the renewal
WAIVER_ACTIVE (grey)	An emergency waiver covers a credential	Fix before it expires
NO_REQUIREMENTS_CONFIGURED (grey)	The unit/position has no requirements: nothing was checked	Requirements (HR policy)

8.1 Read a nurse's eligibility

IMPLEMENTED HR ADMIN SYSTEM ADMIN SUPERVISOR

Purpose. Know who may work and why not.

Who can perform it. HR Admin, System Admin, Supervisor (scope).

Steps.

1. Open Eligibility.
2. Filter: All, Ineligible, Eligible (grace), Eligible (policy warning), Eligible.
3. Read the reasons and "Calculated" — when and by which event.

System result. Nothing changes. The stored result is for today; the roster checks each shift date separately.

Approval. None.

Next step. Resolve ineligibility (next task) or go to Scheduling.

Related. 11. Roster and scheduling

Diagram: "How eligibility is decided" — page 40.

8.2 Resolve an ineligible nurse

IMPLEMENTED HR ADMIN SYSTEM ADMIN SUPERVISOR

Purpose. Get a blocked nurse back to work by fixing the cause, not the symptom.

Who can perform it. HR Admin / System Admin fix records; supervisors read and ask HR.

Steps.

1. Open Eligibility and filter Ineligible.
2. Select the nurse and read each red reason.
3. Identify the root cause with the table above (contract, credential, unit or position).
4. Correct the source record on its own page — Contracts, Credentials, Nurses.
5. Eligibility recalculates automatically in the same step as your correction.
6. Check the new result on Eligibility.
7. Return to Scheduling.

System result. The stored eligibility changes with an audit entry; the next roster check uses it.

Approval. Whatever the correction needs (e.g. a contract approval by another HR person).

Next step. Scheduling.

Related. 6. Contracts · 7. Credentials · 5. Nurses · 11. Roster and scheduling

Diagram: "Resolving an ineligible nurse" — page 41.

8.3 Grant an emergency waiver

IMPLEMENTED SUPERVISOR HR ADMIN

Purpose. In an emergency, let one blocking credential not count for a short time.

Who can perform it. Supervisor or HR Admin only (not System Admin, not break-glass); never for your own credential.

Before you start.

- A clinical justification.
- The waiver covers one credential type, for at most 72 hours.

Steps.

1. On Eligibility, click Grant waiver on the nurse (shown only when a credential blocks).
2. Choose the blocking credential.
3. Write the clinical justification and the expiry (<= 72 hours).
4. Submit.

System result. Audited as high priority. That credential stops blocking until the waiver expires; the message shows the nurse's new eligibility. Shifts published in reliance on it are recorded.

Approval. None.

Next step. Fix the credential before the waiver ends; the waivers list shows active and expired ones.

Common problems.

- No Grant waiver button — Your role cannot waive, the block is not a credential (e.g. no contract), or it is your own record.

Related. 11. Roster and scheduling · 7. Credentials

Diagram: "Emergency waiver" — page 42.

9. Workforce

EMPLOYEE SUPERVISOR HR ADMIN SYSTEM ADMIN

The hospital's structure: departments, units and their beds, positions, and how many staff each unit needs per shift. Everyone can read it; HR keeps it current. Eligibility, the roster and the KPIs all read from here.

Who: Everyone reads; HR Admin and System Admin change it (hospital-wide for structure, unit scope for beds and coverage)

Screen: /workforce (side menu)

Where: Side menu -> Workforce. Tabs: Units, Departments, Positions, Coverage targets.

> Note: Two people editing the same record: the first to save wins. The second sees "Someone else saved a change to this record", nothing of theirs is lost, and the record reloads so the change can be made again on top of the first.

> Note: A coverage target left empty means "not set" — never zero. Shortages warn but never stop publication. Rest, fatigue and skill-mix rules are not defined by the hospital yet and are not enforced.

Diagram: "How the hospital system works" — page 5.

How workforce data feeds the rest

Item	Used by
Units (and the nurse's unit)	Requirements, eligibility, scopes, the roster (a nurse works only in the home unit)
Positions (schedulable or not)	Eligibility (non-schedulable positions cannot be rostered), requirements per position
Beds	Hospital total and the nurse-to-bed KPIs
Critical area (ICU / ER / OR)	Which units count towards KPI A
Patient-care area, Inpatient beds (units); Nurse (positions)	What KPI B and both KPIs count: nurses only, in patient-care areas, against inpatient beds
Coverage targets	Roster board (eligible / target, shortage), auto-fill

9.1 Add or edit a unit

IMPLEMENTED HR ADMIN SYSTEM ADMIN

Purpose. Keep the list of wards and services correct.

Who can perform it. Hospital-wide HR Admin or System Admin.

Steps.

1. Workforce -> Units -> Add unit (or Edit on a row).
2. Code (unique), name, department, description; critical area ICU / ER / OR only for those units.
3. Patient-care area: off for offices and other units whose nurses do not care for patients. Inpatient beds: on only for wards whose beds are hospital operational beds (not ER, OR, day surgery, outpatient or services).
4. New unit: initial beds. Existing unit: Active on/off.
5. Submit.

System result. Saved and audited. The hospital total is recalculated live.

Approval. None.

Next step. Coverage targets and Requirements for the unit.

Common problems.

- Cannot deactivate — The unit still has active employees; move them first.

Related. 7. Credentials · 10. Nursing KPIs

9.2 Change a unit's beds and read the bed history

IMPLEMENTED HR ADMIN SYSTEM ADMIN SUPERVISOR

Purpose. Record the current bed capacity, with the reason, so the KPIs stay true.

Who can perform it. HR Admin or System Admin with the unit in scope. The history: also supervisors.

Steps.

1. Workforce -> Units -> Change beds on the row.
2. New count (0–500) and a reason.
3. Submit. History shows every change: when, before -> after, reason, by whom.

System result. One history row per change; the history is never edited, which is why it can be trusted in an audit.

Approval. None.

Next step. Nursing KPIs use the new count.

Related. 10. Nursing KPIs

9.3 Import units from a CSV file

IMPLEMENTED HR ADMIN SYSTEM ADMIN

Purpose. Create or update many units at once.

Who can perform it. Hospital-wide HR Admin or System Admin.

Steps.

1. Workforce -> Units -> Import CSV.
2. Choose the file or paste it: unit_code, name, department_code, beds, description.
3. Preview: rows created, updated, unchanged, rejected (with reasons).
4. Apply.

System result. Applied rows are saved; the import never deletes or deactivates a unit. At most 500 rows.

Approval. None.

Next step. Check the units list.

9.4 Add or edit a department

IMPLEMENTED HR ADMIN SYSTEM ADMIN

Purpose. Group units into departments (a department scope covers all its units).

Who can perform it. Hospital-wide HR Admin or System Admin.

Steps.

1. Workforce -> Departments -> Add department (or Edit).
2. Code, name, description; Active on/off for existing ones.
3. Submit.

System result. Saved and audited.

Approval. None.

Next step. Assign units to it.

Common problems.

- Cannot deactivate — It still has active units.

Related. 2. Roles and permissions

9.5 Manage positions

IMPLEMENTED HR ADMIN SYSTEM ADMIN

Purpose. Keep the list of position codes (SN, CN, HN …) and whether each can be rostered.

Who can perform it. Hospital-wide HR Admin or System Admin.

Steps.

1. Workforce -> Positions -> Add position (or Edit).
2. Code, title, Arabic title (shown when the interface is Arabic), tier, description, display order, Schedulable, Nurse (KPI), Active.
3. Nurse (KPI): on for licensed nursing positions, off for technicians, care assistants and roles without direct patient care.
4. Submit.

System result. Changing Schedulable re-evaluates everyone in the position. Deprecated positions show "-> replacement".

Approval. None.

Next step. Eligibility for holders of the position.

Common problems.

- Cannot deactivate — Active employees still hold it; change their positions first.

Related. 5. Nurses · 8. Eligibility

9.6 Manage the Rank/Grade master

IMPLEMENTED HR ADMIN SYSTEM ADMIN

Purpose. Keep the list of SCFHS nursing classifications (N01 Senior Specialist Consultant Nurse … N05 Health Assistant Nurse to start) that HR chooses from for an employee's Rank/Grade and for the SCFHS licence's Professional Classification.

Who can perform it. Hospital-wide HR Admin or System Admin; everyone else can view the list.

Steps.

1. Workforce -> Rank/Grade. Search by code, classification or meaning; filter All, Active or Inactive.
2. Add Rank/Grade: code (e.g. N06 — it can never be changed later), SCFHS Nursing Classification, typical meaning, status and sort order. Save.
3. Edit: change the classification, the meaning, the status or the sort order.
4. Delete: a record nobody uses is deleted. One assigned to employees or licences cannot be deleted — you are offered Deactivate instead. Reactivate brings an inactive record back.

System result. The list changes at once, sorted by sort order. An inactive record disappears from new choices but still shows on the employees and licences that use it. Every change (created, updated, deactivated, reactivated, deleted) is in the audit log with the old and new values.

Approval. None.

Next step. None.

Common problems.

- "Only system-wide administrators can change the Rank/Grade master" — Your HR role covers some units only. Ask a hospital-wide HR Admin or a System Admin.
- A code is refused as existing — Codes are unique, including inactive records. Reactivate the existing one instead.
- Staff with no nursing classification (e.g. administrators) — Rank/Grade is required for everyone. Add a record for them, for example N00 — Not applicable (non-nursing), if the hospital agrees.

Related. 5. Nurses · 7. Credentials

9.7 Manage the Nursing Specialty master

IMPLEMENTED HR ADMIN SYSTEM ADMIN

Purpose. Keep the list of nursing specialties (NS001 Clinical Nursing … NS034 General / Unspecified to start) that HR chooses from for an employee's Specialty.

Who can perform it. Hospital-wide HR Admin or System Admin; everyone else can view the list.

Steps.

1. Workforce -> Specialty. Search by code, name or description; filter All, Active or Inactive.
2. + Add Specialty: specialty code (e.g. NS035 — it can never be changed later), name, Arabic name, description, status and sort order. Save.

3. Edit: change the name, Arabic name, description, status or sort order. The dropdown follows the sort order, not the alphabet.
4. Deactivate hides a specialty from new employees; Reactivate brings it back.
5. Delete asks you to confirm. A specialty nobody holds is deleted; one held by employees cannot be deleted — you are offered Deactivate instead.

System result. The Onboard employee and Edit dropdowns change at once. An inactive specialty still shows on the employees who hold it. Every change (created, updated, deactivated, reactivated, deleted) is in the audit log with the old and new values.

Approval. None.

Next step. None.

Common problems.

- "Only system-wide administrators can change the Nursing Specialty master" — Your HR role covers some units only. Ask a hospital-wide HR Admin or a System Admin.
- "A specialty with this name already exists" — Names must be unique (capitals do not matter), so the dropdown never shows look-alikes. Edit or reactivate the existing one instead.

Related. 5. Nurses

9.8 Manage Saudi regions and cities

IMPLEMENTED HR ADMIN SYSTEM ADMIN

Purpose. Keep the list of Saudi Arabia regions (ISO codes SA-01 …) and their cities that HR chooses from for an employee's Job Post (City).

Who can perform it. Hospital-wide HR Admin or System Admin; everyone else can view the list.

Steps.

1. Workforce -> Locations, then Regions or Cities. Search, and filter by status (and by region for cities).
2. Add Region: code (e.g. SA-15 — it can never be changed later), name, Arabic name, status and sort order.
3. Add City: its region, name, Arabic name, status and sort order. It appears under that region in the Job Post window at once.
4. Edit, Deactivate or Reactivate a region or city. A city held by employees cannot move to another region — add it to that region instead.
5. Delete asks you to confirm. A region with cities or employees, or a city employees hold, cannot be deleted — you are offered Deactivate instead.

System result. The Job Post window changes at once. An inactive region hides its cities from new choices; an inactive city disappears from new choices. Both stay on the employees who already have them. Every change is in the audit log with the old and new values.

Approval. None.

Next step. None.

Common problems.

- "Only system-wide administrators can change the Saudi location master" — Your HR role covers some units only. Ask a hospital-wide HR Admin or a System Admin.
- "This region already has a city with this name" — City names are unique within a region (capitals do not matter). The same name in another region is allowed.

Related. 5. Nurses

9.9 Manage facilities

IMPLEMENTED HR ADMIN SYSTEM ADMIN

Purpose. Keep the list of hospitals that HR chooses from for an employee's Actual Work Place / Facility.

Who can perform it. Hospital-wide HR Admin or System Admin; everyone else can only select a facility.

Steps.

1. Open Manage Facilities beside the Actual Work Place / Facility field (Onboard employee or Edit), or Workforce -> Facilities.

2. Add Facility: type the Facility Name (and the Arabic name) and Save. From the form, the new facility is selected at once; what you typed in the form stays.
3. Edit: change the name and Save — the facility keeps its identity, so every employee shows the new name.
4. Delete: confirm. A facility employees use cannot be deleted — you are offered Deactivate instead. Reactivate brings an inactive facility back.

System result. The dropdown changes at once. Names are stored trimmed with single spaces and must be unique (capitals and extra spaces do not count). An inactive facility disappears from new choices but stays on the employees who have it. If the facility you had just chosen (not yet saved) is deleted or deactivated, the choice is cleared and you are asked to pick another. Every change is in the audit log.

Approval. None.

Next step. None.

Common problems.

- No Manage Facilities button — Only hospital-wide HR Admins and System Admins maintain the list. Choose an existing facility, or ask one of them.
- "A facility with this name already exists" — The same name is already on the list (perhaps with other capitals or spaces). Choose it, or reactivate it if inactive.

Related. 5. Nurses

9.10 Set coverage targets

IMPLEMENTED HR ADMIN SYSTEM ADMIN

Purpose. Set the minimum staff each unit needs per shift (Morning 07–15, Evening 15–23, Night 23–07).

Who can perform it. HR Admin or System Admin with the unit in scope.

Steps.

1. Workforce -> Coverage targets.
2. Type the number in the unit's shift cell; it saves when you leave the cell.
3. Clear a cell to make it "not set".

System result. The roster board measures each shift against it; auto-fill fills up to it.

Approval. None.

Next step. Scheduling.

Related. 11. Roster and scheduling · 10. Nursing KPIs

---

10. Nursing KPIs

HR ADMIN SYSTEM ADMIN SUPERVISOR

The MoH Ada'a nurse-to-bed indicators, for one shift or a month. KPI A rates the ICU, ER and OR critical areas (each 1–4) and averages them; KPI B (QFR-55) is hospital-wide. Nurses = the average number of nurses on duty per shift (published roster, nurse positions only); KPI B counts nurses in patient-care areas against inpatient beds.

Who: HR Admin, System Admin, Supervisor

Screen: /kpi (side menu)

Where: Side menu -> Nursing KPIs.

> Note: Definitions and levels follow the MoH Ada'a indicator profiles "Nurse to Bed Ratio (Critical Areas)" and QFR-55 "Hospital's Nurse to Bed Ratio (Hospital-Wide)". What is counted is set in Workforce: Nurse (KPI) on positions; critical area, Patient-care area and Inpatient beds on units. The page lists what was counted.

10.1 Read the nurse-to-bed KPIs

IMPLEMENTED HR ADMIN SYSTEM ADMIN SUPERVISOR

Purpose. See staffing against beds for a shift, or for a month as the Ada'a cards report it.

Who can perform it. HR Admin, System Admin, Supervisor.

Steps.

1. Open Nursing KPIs.
2. One shift: choose the date and the shift. Month: choose the month (a month still running counts the shifts up to today).
3. KPI A: each critical area with ratio, nurses on duty, beds and code (1–4), and the average band. KPI B: the hospital ratio and band.
4. What is counted: the nurse positions and the units behind the figures.

System result. Nothing changes. Only published shifts of nurse positions count — drafts do not. Beds are the counts as they are now.

Approval. None.

Next step. Low staffing: Scheduling. Wrong beds, critical areas, patient-care areas, inpatient beds or nurse positions: Workforce.

Related. 9. Workforce · 11. Roster and scheduling

11. Roster and scheduling

SUPERVISOR HR ADMIN SYSTEM ADMIN EMPLOYEE

The weekly roster board of a unit. The Supervisor or Nursing Admin drafts shifts from the nurses who are eligible on each date and checks coverage; the Nursing Director approves the week; then it is published. Eligibility is checked live for every shift date and again at publication. Employees see their own shifts and their home unit's published schedule.

Who: Supervisor and Nursing Admin (draft, ask for approval, publish their units); Nursing Director (approves); HR Admin and System Admin (read); employees (own shifts)

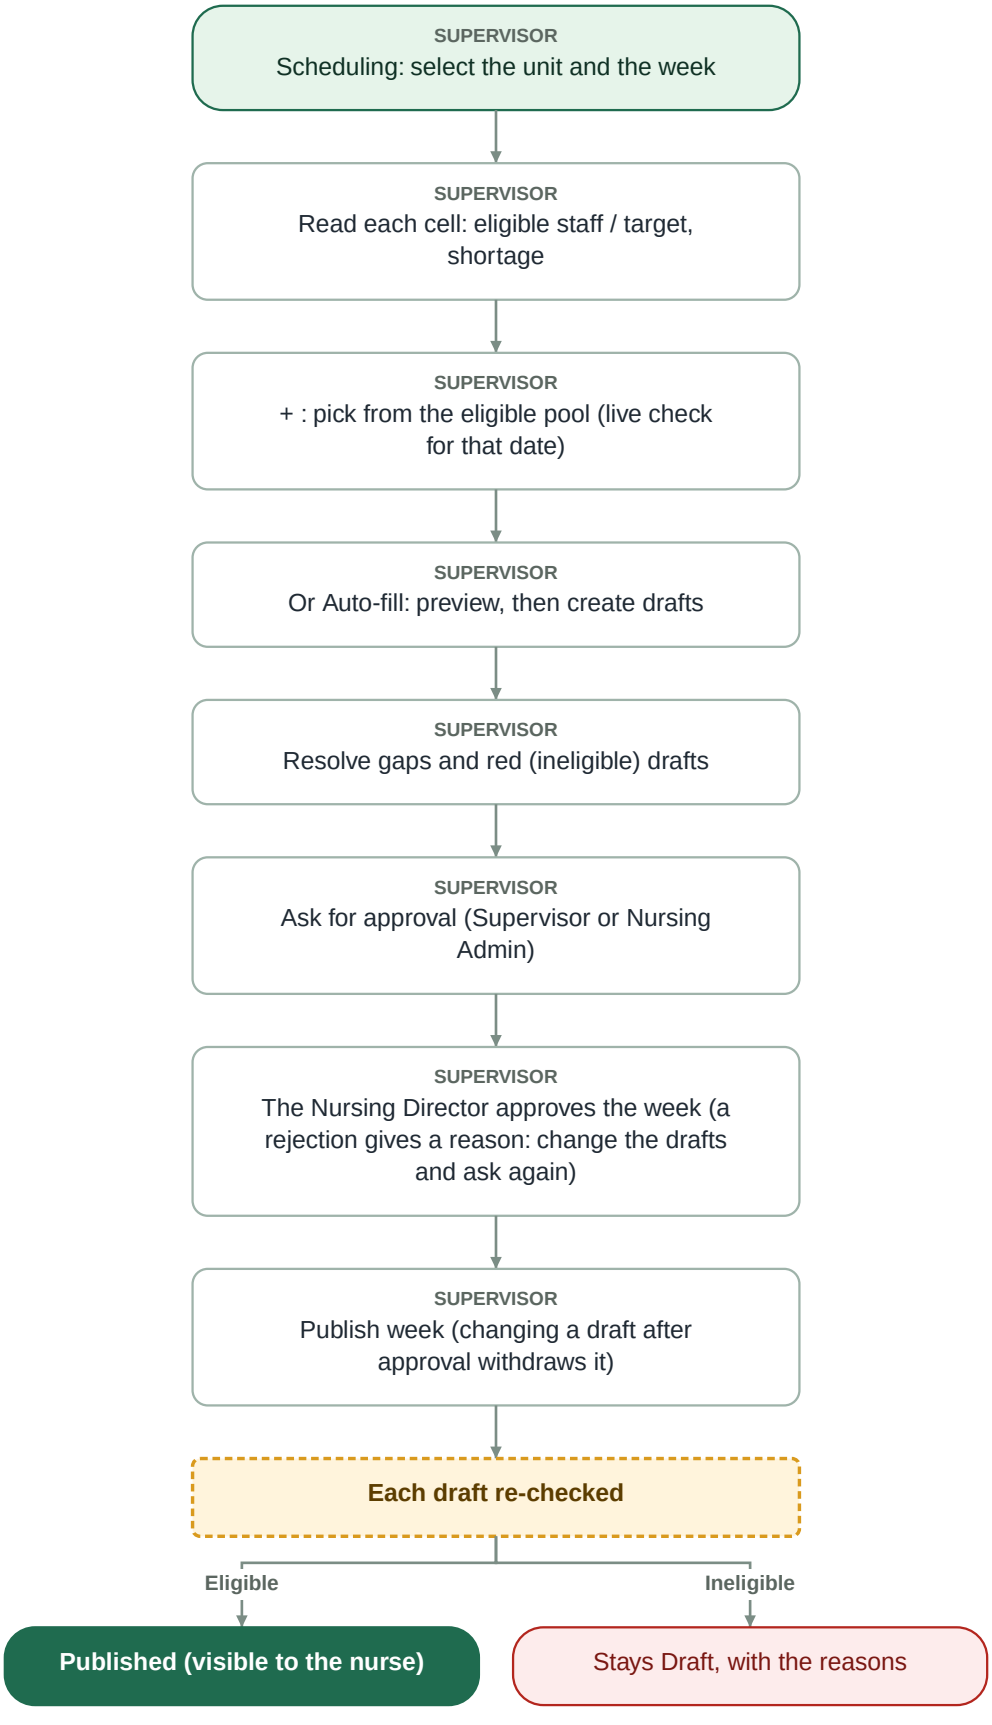

Screen: /scheduling (side menu)

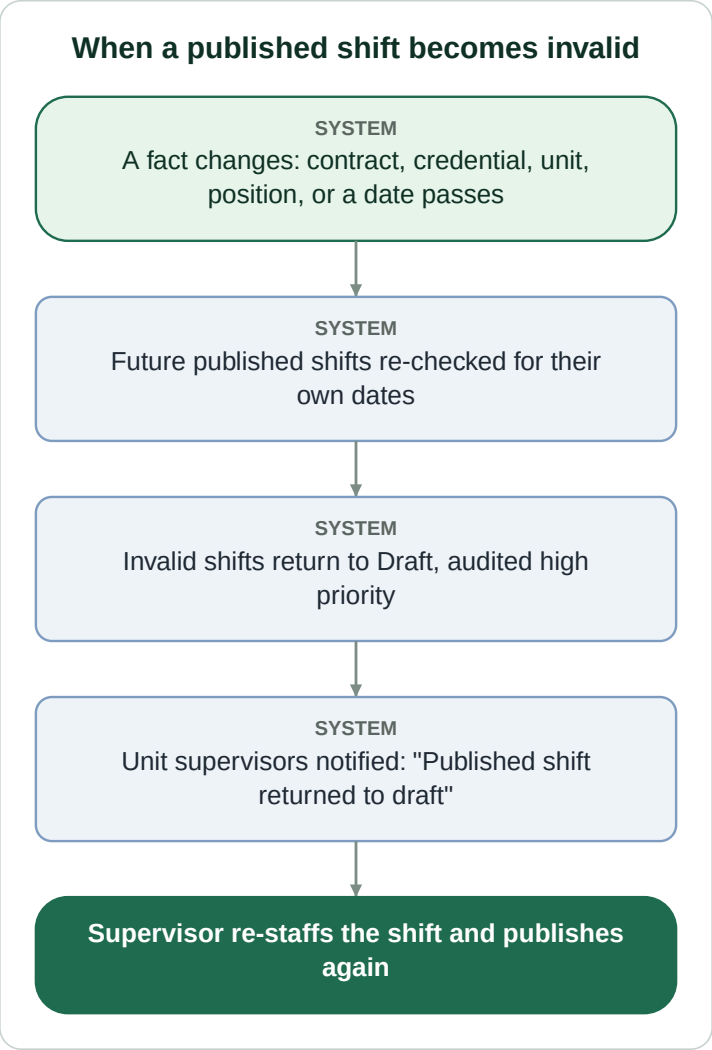

Where: Side menu -> Roster & Scheduling. Choose a unit and a week.

> Note: A nurse is scheduled only in their home unit, and only once per date and shift across all units. Past dates cannot be drafted or published.

> Important: Auto-fill is a helper, not policy: rest, fatigue and overtime rules are not defined by the hospital and are not checked.

Building and publishing a roster

Reading the board

You see	Meaning
3/4 in a cell	Eligible published staff / coverage target
Target not set	No coverage target for that unit and shift
Orange -1	Published shortage against the target
N drafts	Drafts not yet published
Dashed tag	A draft; solid = published
Tag colour	Green eligible, gold grace, orange policy warning, red ineligible — hover for reasons

11.1 Add a nurse to a shift (draft)

IMPLEMENTED SUPERVISOR

Purpose. Put an eligible nurse on a shift.

Who can perform it. Supervisor of the unit.

Steps.

1. Open Roster & Scheduling, choose the unit and the week (‹ › move by a week).
2. Click + in the cell (date × shift).
3. The pool lists the unit's nurses with their eligibility for that date and any shifts that day.
4. Click Assign.

System result. A Draft assignment; the message shows the nurse's eligibility for the date.

Approval. None.

Next step. Publish the week.

Common problems.

- A nurse is missing from the pool — Another unit is their home unit, or they are deleted.
- Refused: already on a shift — One assignment per nurse per date and shift.

Related. 8. Eligibility

Diagram: "Building and publishing a roster" — page 52.

11.2 Auto-fill the week

IMPLEMENTED SUPERVISOR

Purpose. Propose drafts up to each shift's coverage target.

Who can perform it. Supervisor of the unit.

Steps.

1. Choose the unit and week, click Auto-fill.
2. Read the proposal: proposed assignments, unfilled shifts, shifts without a target (not filled).
3. Click Create drafts — or Cancel.

System result. Drafts only — eligible nurses from the unit, fewest shifts first, at most one auto-filled shift per nurse per day.

Approval. None.

Next step. Review the drafts and publish.

Related. 9. Workforce

Diagram: "Building and publishing a roster" — page 52.

11.3 Publish the roster

IMPLEMENTED SUPERVISOR

Purpose. Make the week's drafts official so nurses see them.

Who can perform it. Supervisor or Nursing Admin of the unit, after the Nursing Director has approved the week.

Before you start.

- The Nursing Director has approved the dates (see the approval message above the board). Changing, adding or removing a draft in an approved week withdraws the approval; ask again.

Steps.

1. Resolve red (ineligible) drafts and gaps.
2. Click Ask for approval. The Nursing Director gets a notice (with an Open roster link) and approves or rejects it on the same page; a rejection gives a reason, and you are told the outcome. You cannot approve your own request.
3. When the approval message turns green, click Publish week.
4. Read the result: how many were published, which were blocked and why, and how many rely on a grace period or waiver.

System result. In one step every draft is re-checked for its date: eligible ones are Published; ineligible ones stay Draft with the reasons. Grace or waiver reliance is recorded and audited. Shortages warn but never block.

Approval. The Nursing Director approves the unit and dates before publication.

Next step. Attendance on the day.

Common problems.

- Publish week is greyed out — The Nursing Director has not approved these dates yet, or a draft changed after the approval. Click Ask for approval.
- Some drafts stayed Draft — Those nurses are ineligible on that date: see the reasons, fix them or choose someone else.

Related. 8. Eligibility · 12. Attendance

Diagram: "Building and publishing a roster" — page 52.

11.4 Remove a draft or cancel a published shift

IMPLEMENTED SUPERVISOR

Purpose. Take a nurse off a shift.

Who can perform it. Supervisor of the unit.

Steps.

1. Click the nurse's tag in the cell.
2. Draft: confirm removal. Published: give the reason, then confirm.

System result. Removed (draft) or Cancelled (published, with the reason). Audited.

Approval. None.

Next step. Re-staff the shift.

11.5 Handle a shift that returned to draft

IMPLEMENTED SUPERVISOR

Purpose. React when a published nurse stops being eligible.

Who can perform it. Supervisor of the unit (notified automatically).

Steps.

1. Open the notice "Published shift returned to draft".
2. Open the week on the board: the shift shows as a red draft.
3. Assign another eligible nurse, or wait for the fix (e.g. a renewal approval) and publish again.

System result. The roster is valid again once republished.

Approval. None.

Next step. Notifications.

Related. 13. Notifications · 8. Eligibility

Diagram: "When a published shift becomes invalid" — page 53.

11.6 See your own shifts

IMPLEMENTED EMPLOYEE

Purpose. Know when you work.

Who can perform it. Every employee.

Steps.

1. Open Roster & Scheduling.
2. My shifts: the next 4 weeks. Below: your home unit's published schedule.

System result. Read only; only published shifts are shown.

Approval. None.

Next step. —

Related. 17. Employee self-service

---

12. Attendance

SUPERVISOR HR ADMIN SYSTEM ADMIN EMPLOYEE

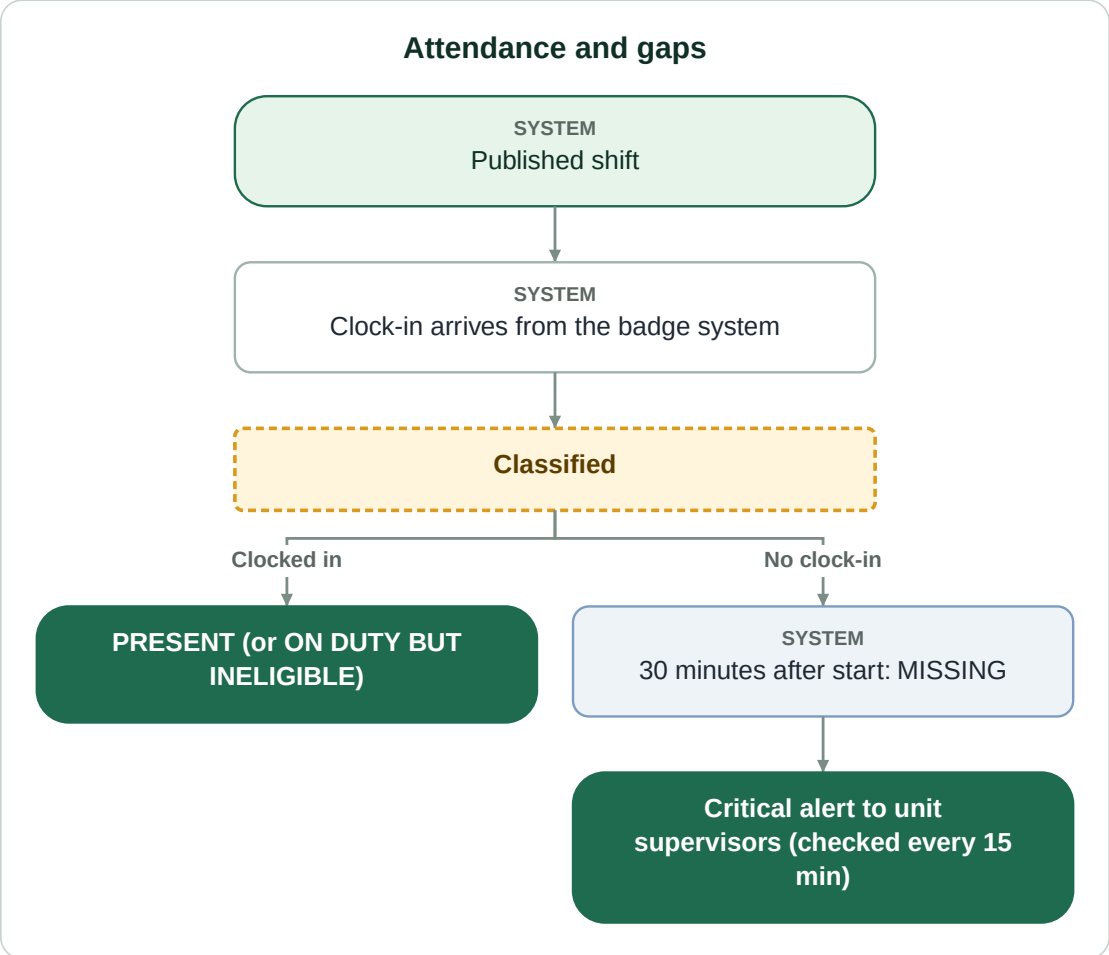

Planned versus actual: for a unit and date, every published shift with its clock-in and a status. Clock events come from the hospital badge system; nothing is clocked by hand.

Who: HR Admin, System Admin, Supervisor (unit view); employees (own clock events)

Screen: /attendance (side menu)

Where: Side menu -> Attendance. Choose the unit and the date.

> Note: The badge-system interface is built (the badge system signs in as an API client), but the hospital's badge system is not connected yet, so the live server receives no clock events. The Badge simulator (System Admin) is switched off on the live server; it works only where the server setting BADGE_SIMULATOR is on. Manual clocking is not part of V04.

Statuses

Status	When	Do
Upcoming	The shift has not started	—
Waiting	Started less than 30 minutes ago, no clock-in yet	Wait
Present	Clocked in from 30 minutes before the start	—
Missing	No clock-in and 30 minutes have passed since the start	Call the nurse; re-staff; a critical alert went to the unit supervisors

Status	When	Do
On duty but ineligible	Clocked in, but the nurse is ineligible today	Supervisor and HR act at once: read Eligibility, fix or relieve the nurse

12.1 Check attendance gaps

PARTIALLY IMPLEMENTED SUPERVISOR HR ADMIN SYSTEM ADMIN

The gap view and alerts work; real clock events wait for the hospital badge system to be connected.

Purpose. Find missing or ineligible nurses on shift.

Who can perform it. Supervisor, HR Admin, System Admin (scope).

Steps.

1. Open Attendance.
2. Choose the unit and date.
3. Read each shift: times, clock-in, status and reasons.

System result. Nothing changes. The alert job (every 15 minutes) sends one critical notice per missing assignment to the unit's supervisors.

Approval. None.

Next step. Missing: re-staff in Scheduling. On duty but ineligible: Eligibility.

Related. 11. Roster and scheduling · 8. Eligibility · 13. Notifications

Diagram: "Attendance and gaps" — page 56.

12.2 See your own clock events

IMPLEMENTED EMPLOYEE

Purpose. Check what the badge system recorded for you.

Who can perform it. Every employee.

Steps.

1. Open Attendance: the last 30 days of your clock events (time, event, source).

System result. Read only.

Approval. None.

Next step. A wrong event: tell your supervisor (corrections are not in V04).

Related. 17. Employee self-service

13. Notifications

EMPLOYEE SUPERVISOR HR ADMIN SYSTEM ADMIN

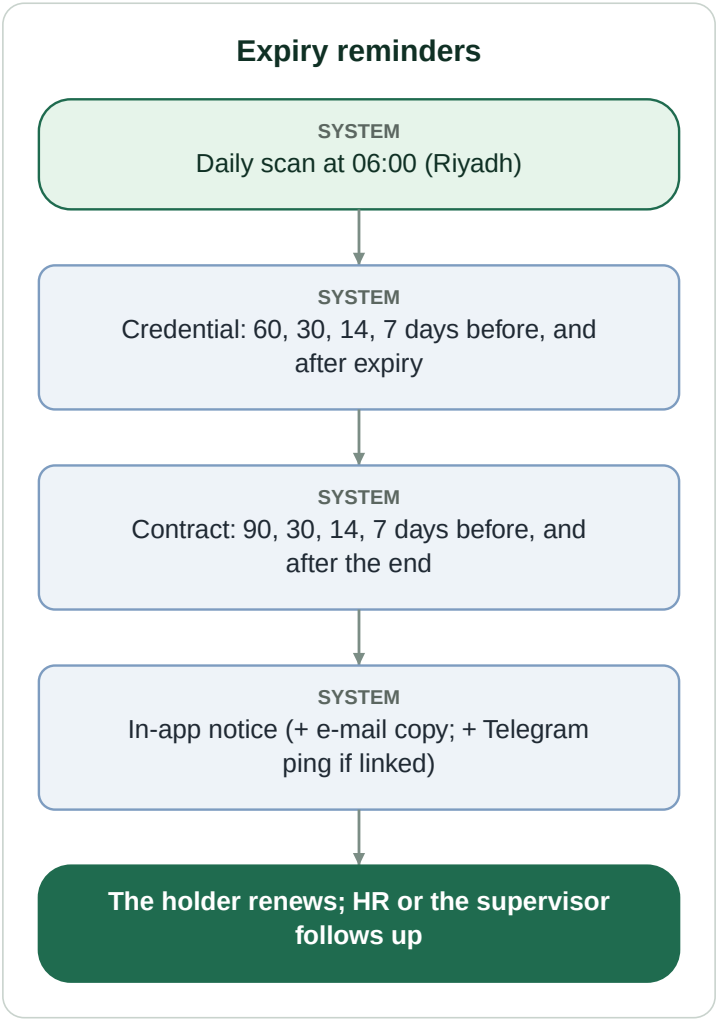

Your action queue: each notice tells you something needs you — a credential or contract nearing its end, a shift returned to draft, a missing nurse, a request to answer. The bell at the top shows how many are unread.

Who: Everyone (own notices only)

Screen: /notifications (side menu)

Where: The bell at the top, or Side menu -> Notifications.

> Note: Each notice is in the app; when the hospital's e-mail is on, a copy goes to your e-mail too, and a short Telegram message ("something is waiting", never the details) if you linked Telegram. Approval requests are not sent as notifications: check Approvals.

Notices the system sends

Notice	Who receives it	Do
Credential expiring soon / Credential expired	Holder; then supervisor and HR as it gets closer	Renew (My Credentials); HR decides the renewal
Contract ending soon / Contract ended	Employee and HR; supervisor from 14 days	HR renews the contract

Notice	Who receives it	Do
Renewal Required — Grace Period Active / Grace period in use	Holder / HR in scope, when grace is first used	Decide the renewal before grace ends
Grace period ended without renewal	HR in scope	The nurse is ineligible now: renew or re-staff
New credential requirement	Nurses affected by a new transition requirement	Obtain the credential before the deadline
Published shift returned to draft	Unit supervisors	Re-staff the shift
Critical coverage alert: not clocked in / ineligible nurse on duty	Unit supervisors	Call the nurse; re-staff; check Eligibility
SCFHS: <credential> of <nurse>	HR in scope	Check the record against SCFHS
Personal data request	HR	Work it in Data protection
Break-glass account activated	The recipients configured for break-glass alerts	Verify the emergency
Memo, meeting or seminar announcement	The audience the sender chose	Open announcement
Eligibility drift corrected; Document storage problem	System administrators	Review Background jobs

13.1 Read and clear notifications

IMPLEMENTED EMPLOYEE SUPERVISOR HR ADMIN SYSTEM ADMIN

Purpose. Work through what needs you.

Who can perform it. Everyone.

Steps.

1. Click the bell or open Notifications. Unread is shown first; switch to All for history.
2. Read the priority (Critical, High, Medium, Low), title and message (Arabic when the page is in Arabic).
3. Act on it, then Mark read — or Mark all read.

System result. Read notices leave the unread count; they stay in All.

Approval. None.

Next step. The page the notice is about.

Related. 7. Credentials · 6. Contracts · 11. Roster and scheduling

Diagram: "Expiry reminders" — page 58.

14. Announcements

EMPLOYEE SUPERVISOR HR ADMIN SYSTEM ADMIN

Memos, meeting schedules and seminar notices from Nursing Administration and supervisors. The Board lists those sent to you; senders write, preview and send them here.

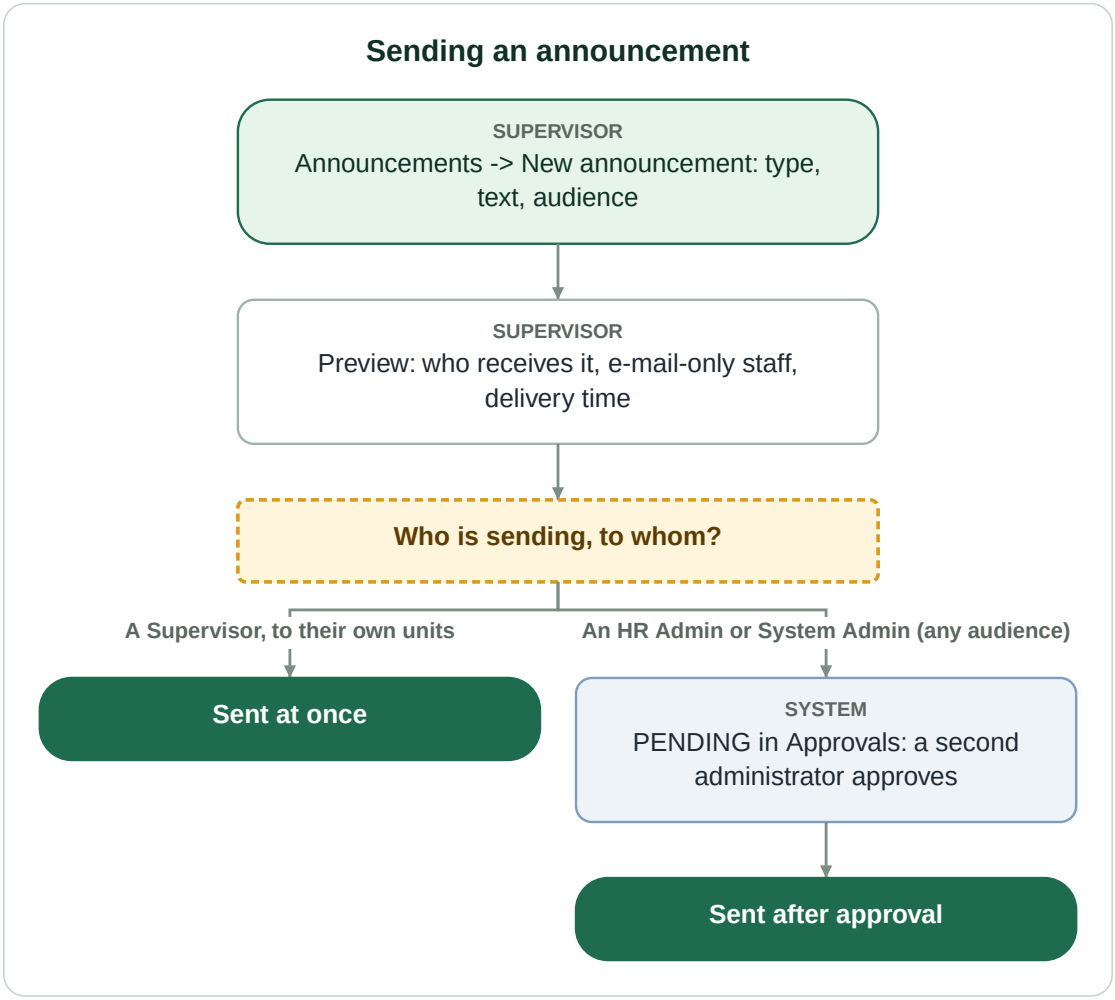

Who: Everyone reads what is sent to them; HR Admin, Supervisor and System Admin (while elevated) send

Screen: /announcements (side menu)

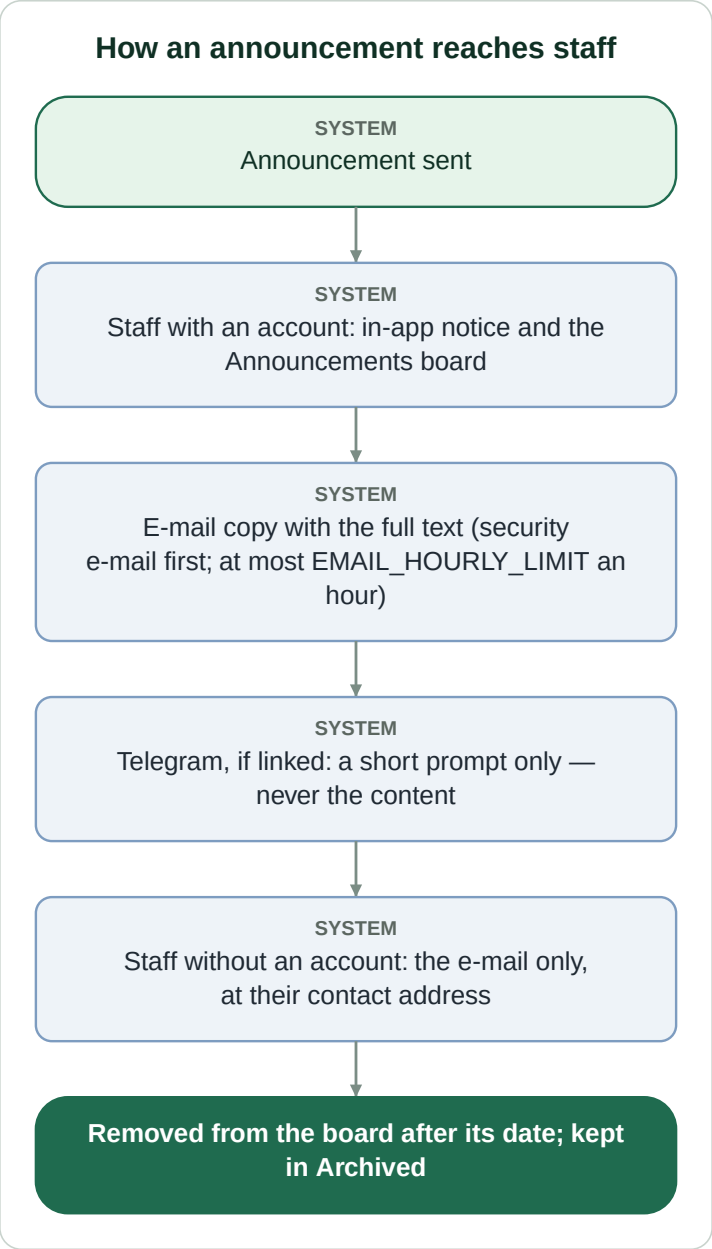

Where: Side menu -> Announcements. A notice in Notifications, and the button in the e-mail, open the announcement itself.

> Note: Staff with an account get the announcement in the app and by e-mail; if they linked Telegram, a short prompt with no content. Staff without an account get the e-mail only, at the contact address on their staff record (no link to the app; an online meeting link is written in the e-mail).

> Important: Do not include patient information. A sent announcement cannot be edited: cancel it and send a new one.

Memos, meeting schedules and seminar notices (owner decisions 2026-10-05). Nothing is edited once sent: cancel it and send a new one.

Who may send to whom (owner decisions 2026-10-05)

Sender	Audience they can choose	Sent
Supervisor	Their own units, or people in them	At once
HR Admin	Units and departments in their scope; the whole hospital with hospital-wide scope; people	After a second HR Admin or System Admin approves (Approvals)
System Admin (while elevated)	Any audience	After a second administrator approves
Employee	—	Cannot send

The three types

Type	Fields	Default priority	On the board until
Memo	Title, text, memo / reference number	Low (High can be chosen)	30 days
Meeting	Start (required), end, place, online link	Medium	The day after the meeting

Type	Fields	Default priority	On the board until
Seminar	Start (required), end, place, online link, speaker, CE hours	Low	The day after the seminar

14.1 Read announcements

IMPLEMENTED EMPLOYEE SUPERVISOR HR ADMIN SYSTEM ADMIN

Purpose. See memos, meetings and seminars sent to you.

Who can perform it. Everyone (only announcements addressed to you).

Steps.

1. Open Announcements (side menu), or click Open announcement on the notice in Notifications, or the button in the e-mail.
2. The Board shows current announcements; filter by type, or switch to Archived for past ones.
3. Click one to read it: time (Riyadh), place, Join online for an online meeting, sender. In Arabic you see the Arabic text when the sender wrote one.

System result. Nothing changes; the notice in Notifications can be marked read.

Approval. None.

Next step. Attend the meeting or seminar; follow the memo.

Common problems.

- "This announcement is not available to you." — It was not sent to you, or the link is wrong. Ask the sender.
- It disappeared from the Board. — Its board date passed (look in Archived), or it was cancelled — opening it from the notice shows why.

Related. 13. Notifications

Diagram: "How an announcement reaches staff" — page 61.

14.2 Write and send an announcement

IMPLEMENTED SUPERVISOR HR ADMIN SYSTEM ADMIN

Purpose. Tell staff about a memo, a meeting or a seminar, in the app, by e-mail and with a Telegram prompt.

Who can perform it. HR Admin and Supervisor within their scope; System Admin while elevated.

Before you start.

- Have the text ready, in English and (recommended) Arabic.
- For a meeting or seminar: the date, time and place or online link.

Steps.

1. Announcements -> New announcement.
2. Choose the type (Memo, Meeting, Seminar) and fill in the title and text; open Arabic text to add the Arabic version.
3. For a meeting or seminar, set the start (and end), place and online link; for a seminar, the speaker and CE hours.
4. Under Send to, choose the audience: units (a supervisor sees only their own), departments, the whole hospital, or people by name. Narrow the audience by role, position or specialty if needed.
5. Leave "Remove from the board on" empty for the default, or choose a date.
6. Click Preview and send. Check how many people receive it, how many only by e-mail, and the e-mail delivery time.
7. Click Send (a supervisor to their own units) or Send for approval (HR Admin and System Admin).

System result. Sent: on the recipients' Board and in their Notifications, e-mails queued. Sent for approval: it waits in Nursing Administration -> Approvals; Sent by me shows "Waiting for approval".

Approval. Every HR Admin or System Admin announcement needs a second HR Admin or System Admin whose scope covers the audience (Approvals). A supervisor's announcement to their own units needs none.

Next step. Sent by me shows its status. A rejected one can be copied to a new announcement and corrected.

Common problems.

- "This audience is outside your assigned scope." — Choose units you supervise or manage. The whole hospital needs hospital-wide HR scope; someone without a unit can only be chosen by hospital-wide HR.
- "Nobody is in this audience." — No account or staff member matches: change the units, people or filters.
- The e-mail delivery time is long. — E-mail is limited per hour by the mail provider (EMAIL_HOURLY_LIMIT); security e-mails go first. The in-app notice is immediate.
- A mistake after sending. — Cancel it (with a reason) and send a corrected one; withdraw a pending one in Approvals to edit it again.

Related. 3. Approvals (four-eyes) · 13. Notifications

Diagram: "Sending an announcement" — page 60.

14.3 Cancel an announcement

IMPLEMENTED SUPERVISOR HR ADMIN SYSTEM ADMIN

Purpose. Withdraw an announcement already sent — a postponed meeting, a mistake.

Who can perform it. The sender, or an HR Admin / System Admin whose scope covers its audience.

Steps.

1. Open the announcement (Board, Sent by me, or All announcements).
2. Click Cancel announcement.
3. Write the reason (at least 10 characters) and confirm.

System result. E-mails and Telegram prompts not yet delivered are stopped; it leaves the Board; people who open it see "Cancelled" and the reason. Audited.

Approval. None.

Next step. Send a new announcement if needed (Copy to a new announcement keeps the text).

Related. 13. Notifications

15. Nursing Administration

HR ADMIN SYSTEM ADMIN

Accounts, roles, approvals, hospital set-up, data protection and system tools. HR Admins see the people and data tabs; System Admins also see the system tabs, and the people tabs only while elevated.

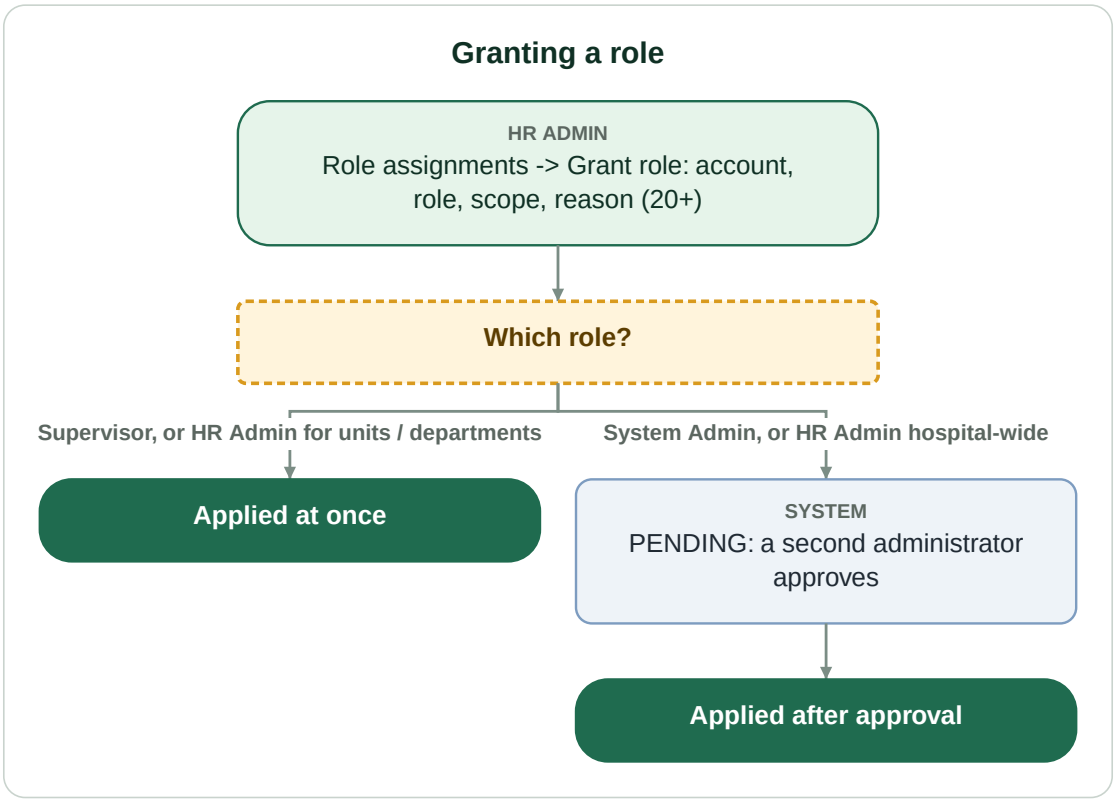

Who: HR Admin and System Admin

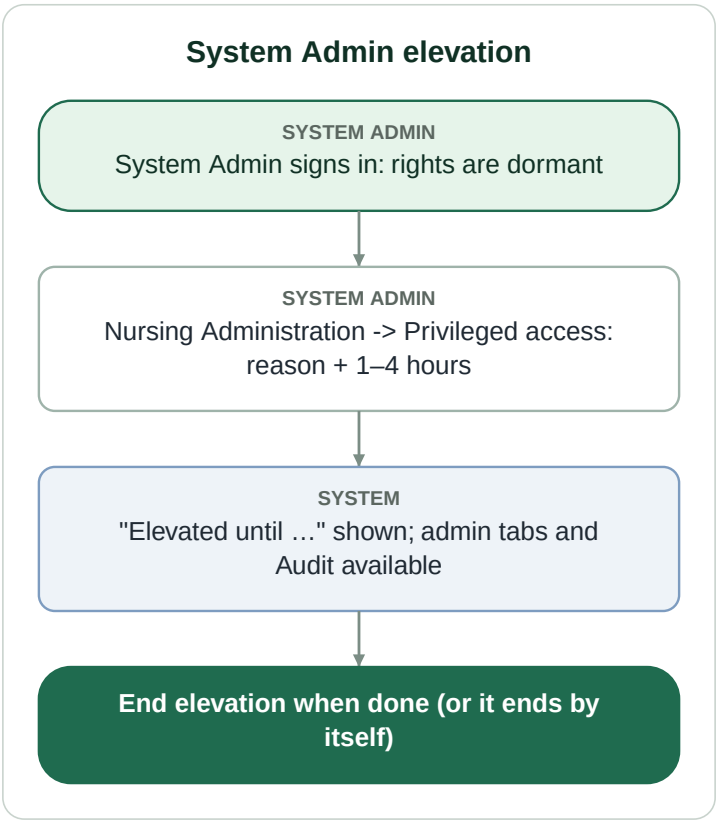

Screen: /admin (side menu)

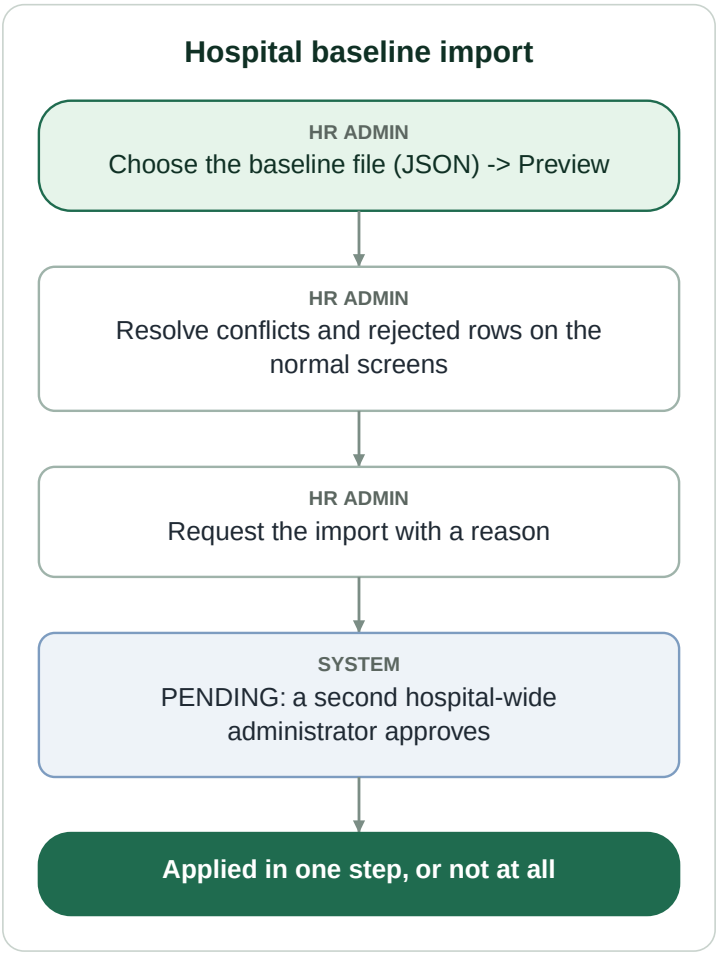

Where: Side menu -> Nursing Administration.

> Important: Nobody manages their own account, grants or revokes their own role, or decides their own request. The break-glass account is managed outside the application.

> Note: Telegram inbox, SCFHS registry and Badge simulator are demonstration tools: they hold synthetic data only and stand in for systems the hospital has not connected yet. On the live server the SCFHS registry and the Telegram inbox are in use; the Badge simulator is switched off.

System Admin elevation
SYSTEM ADMIN
System Admin signs in: rights are dormant
SYSTEM ADMIN
Nursing Administration -> Privileged access: reason + 1–4 hours
SYSTEM
"Elevated until …" shown; admin tabs and Audit available
End elevation when done (or it ends by itself)

Hospital baseline import
HR ADMIN
Choose the baseline file (JSON) -> Preview
HR ADMIN
Resolve conflicts and rejected rows on the normal screens
HR ADMIN
Request the import with a reason
SYSTEM
PENDING: a second hospital-wide administrator approves
Applied in one step, or not at all

The tabs

Tab	Purpose	Who	Changes need	Audited
Accounts	Logins: create, reset, deactivate, link to a staff record	HR Admin; System Admin (elevated)	—	Yes
Role assignments	Grant and revoke Supervisor / HR Admin / System Admin	HR Admin; System Admin (elevated)	Second admin for System Admin and hospital-wide HR Admin	Yes
Approvals	Decide protected changes	HR Admin; System Admin (elevated)	A different administrator	Yes
Hospital baseline import	Load departments, units, beds, positions, credential categories and types from a file	Hospital-wide HR Admin; System Admin (elevated)	Second hospital-wide admin	Yes
Data protection	Personal-data requests; the processing register and its sign-off	HR Admin; System Admin (elevated)	Erasure: a System Admin	Yes (register changes: high priority)
Eligibility logic	Shadow mode for a new version of the eligibility rules	Read: HR, System Admin; decide: hospital-wide HR Admin	—	Yes
Privileged access	Elevate System Admin rights for 1–4 hours	System Admin	A reason	Yes
Background jobs	Schedules, last runs, run now; business health	System Admin	—	Yes
Telegram inbox	Messages the simulated Telegram gateway kept; test messages	System Admin	—	—
SCFHS registry	The simulated SCFHS answers used until real SCFHS access	System Admin	—	Yes
Badge simulator	Simulated clock events for demonstrations; off on the live server (setting BADGE_SIMULATOR)	System Admin	—	Yes
API clients	Other systems allowed to call the API (FHIR reads, badge events)	System Admin	—	Yes
Access matrix	Who may do what, by area (read only)	Everyone in Administration	—	—

15.1 Create a login account

IMPLEMENTED HR ADMIN SYSTEM ADMIN

Purpose. Give someone a login without e-mail (or for a person with no staff record).

Who can perform it. HR Admin; System Admin while elevated. An account without a staff link needs hospital-wide scope.

Steps.

1. Accounts -> New account.
2. E-mail (the sign-in name), display name, a first password (12–72 characters).
3. Employee id (optional) links the login to a staff record, which gives the self-service pages.
4. Create. Give the password to the person in person or by phone, never in the same message as the e-mail.

System result. The account exists with no extra role; audited.

Approval. None.

Next step. Role assignments if the person needs a role. Supervisor and HR roles must set up two-factor sign-in at first sign-in.

Related. 2. Roles and permissions · 5. Nurses

15.2 Reset, change e-mail, reset two-factor, deactivate

IMPLEMENTED HR ADMIN SYSTEM ADMIN

Purpose. Help a user who is locked out or has changed details.

Who can perform it. HR Admin; System Admin while elevated. Not on your own account, never on break-glass.

Before you start.

- Confirm who is asking before any of these.

Steps.

1. Send reset link: a link to the account's own e-mail, valid 24 hours.
2. Change e-mail: a confirmation link goes to the new address (valid 30 minutes); nothing changes until the person opens it; the old address is told.
3. Reset two-factor: removes the authenticator and signs the account out; a new one is set up at next sign-in.
4. Telegram link: shows a QR code the person scans to connect Telegram (15 minutes, single use).
5. Deactivate / Activate: blocks or restores sign-in.

System result. Each action is audited.

Approval. None.

Next step. —

Common problems.

- Deactivate refused — It would leave no usable System Admin.

Related. 18. Security and your account

15.3 Grant or revoke a role

IMPLEMENTED HR ADMIN SYSTEM ADMIN

Purpose. Give or remove Supervisor, HR Admin or System Admin rights within a scope.

Who can perform it. HR Admin or System Admin (elevated), covering the scope granted; never on their own account.

Steps.

1. Role assignments -> Grant role.
2. Account, role, scope type (Units, Departments, System-wide) and the units or departments.
3. Reason — a real sentence of 20+ characters (it is kept in the audit trail).
4. Expiry (optional): Supervisor at most 90 days, others at most 365.
5. Submit. To revoke: Revoke on the row, reason of 10+ characters.

System result. Supervisor, or HR Admin for units / departments: applied at once. System Admin, or HR Admin hospital-wide: "Submitted for approval — a second administrator must approve it".

Approval. Four-eyes for System Admin and hospital-wide HR Admin.

Next step. Approvals (for the protected ones).

Common problems.

- "already holds an active assignment for this role and scope type" — One active row per person, role and scope type. To change the units: Revoke the row, then Grant again.
- Cannot revoke the last System Admin — Grant another System Admin first.

Related. 3. Approvals (four-eyes) · 2. Roles and permissions

Diagram: "Granting a role" — page 64.

15.4 Import the hospital baseline

IMPLEMENTED HR ADMIN SYSTEM ADMIN

Purpose. Load the hospital's set-up in one step from a baseline file.

Who can perform it. Hospital-wide HR Admin or System Admin (elevated); approved by another hospital-wide administrator.

Steps.

1. Hospital baseline import -> Choose file (JSON) -> Preview.
2. Rows: Create, Unchanged, Conflict, Rejected — with totals of beds and credential fields.
3. Conflicts and rejected rows are fixed on the normal screens, never by the import.
4. Write the reason (10+ characters) and Request import.

System result. A pending request. When approved, it is applied in one step or not at all.

Approval. Four-eyes.

Next step. Approvals.

Related. 9. Workforce · 7. Credentials · 3. Approvals (four-eyes)

Diagram: "Hospital baseline import" — page 65.

15.5 Answer personal-data requests

IMPLEMENTED HR ADMIN SYSTEM ADMIN

Purpose. Handle an employee's request to see, export, correct or erase their personal data (PDPL).

Who can perform it. HR Admin or System Admin (elevated) within scope; not your own request. Erasure: a System Admin other than whoever logged it.

Steps.

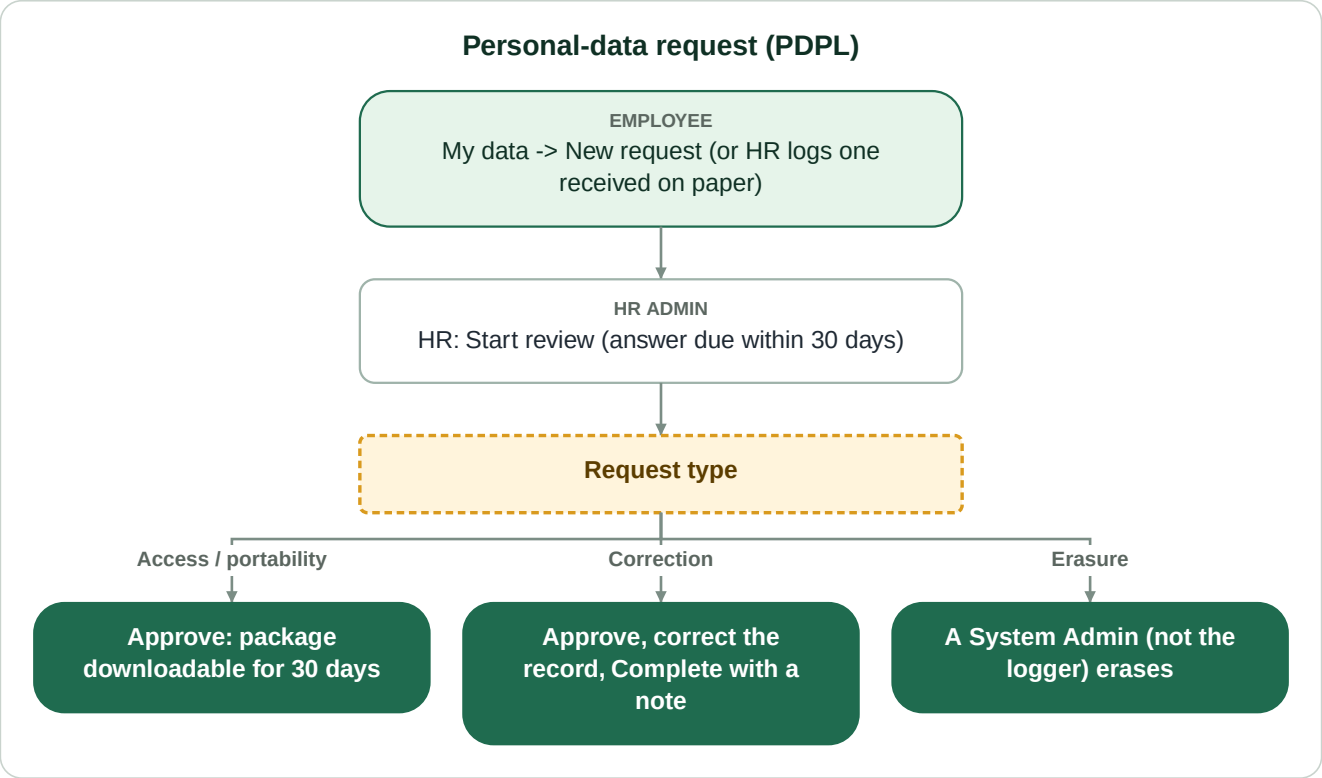

1. Data protection -> Personal data requests (open ones shown; filter by type).
2. Log request: record one received on paper or by e-mail.
3. Start review, then Approve: access / portability -> the package is downloadable for 30 days; correction -> correct the record, then Complete with what changed.
4. Decline with a reason (10+ characters) when it cannot be granted.
5. Erasure (System Admin): read the warning, type the employee's job number, Erase.

System result. Each step is audited; the employee follows the status on My data. The answer is due within 30 days (shown as Due).

Approval. Erasure needs a System Admin.

Next step. —

Related. 17. Employee self-service

15.6 Maintain the processing register

IMPLEMENTED SYSTEM ADMIN HR ADMIN

Purpose. Record the lawful basis, purpose and retention for each kind of sensitive data.

Who can perform it. Edit: System Admin (elevated). Sign-off: HR Admin or System Admin acting for the Data Protection Officer.

Steps.

1. Data protection -> Edit an entry: purpose, retention, active, reason (10+).
2. Sign-off: Record sign-off with title and note, confirm — once a year or after a change.

System result. Audited as high priority. A data kind without an active entry cannot be recorded at all.

Approval. None.

Next step. —

15.7 Review a new version of the eligibility rules

IMPLEMENTED HR ADMIN

Purpose. Check that new eligibility logic judges nurses correctly before it takes over.

Who can perform it. Hospital-wide HR Admin decides; HR and System Admin read.

Steps.

1. Eligibility logic: the active and the shadow version.
2. For each nurse the new version would judge differently: New logic is right, or Reject, with a note (10+).
3. Promote when allowed (7 days without disagreement, or every finding approved) — or Retire.

System result. The shadow version never changes a result. Promotion recalculates every nurse at once; audited.

Approval. None beyond the HR decision.

Next step. Eligibility.

Related. 8. Eligibility

15.8 Elevate System Admin rights

IMPLEMENTED SYSTEM ADMIN

Purpose. Switch on dormant System Admin rights for a documented task.

Who can perform it. System Admin.

Steps.

1. Privileged access: reason (10+ characters) and hours (1–4).
2. Elevate. An orange "Elevated until …" tag appears at the top.
3. End elevation when finished.

System result. Admin tabs and Audit & Compliance work until the time ends. Audited with the reason.

Approval. None.

Next step. The task you elevated for.

Related. 18. Security and your account · 16. Audit & Compliance

Diagram: "System Admin elevation" — page 65.

15.9 Check background jobs and business health

IMPLEMENTED SYSTEM ADMIN

Purpose. See that the scheduled work runs (expiry scan, daily transitions, SCFHS sync, attendance alerts …).

Who can perform it. System Admin.

Steps.

1. Background jobs: business health (eligibility drift, e-mail and Telegram delivery) and each job's schedule and last runs.
2. Run now to repeat a job (it is safe: each run is keyed to its period).

System result. A run is recorded with its result.

Approval. None.

Next step. —

Related. 20. Troubleshooting

15.10 Register an API client

IMPLEMENTED SYSTEM ADMIN

Purpose. Let another system (HIS, payroll, the badge system) call the API without a person.

Who can perform it. System Admin.

Steps.

1. API clients -> add: name and scopes.
2. Copy the secret shown once into the other system.
3. Replace secret or Revoke when needed.

System result. The system exchanges its id and secret for a 15-minute token.

Approval. None.

Next step. —

Related. 12. Attendance

16. Audit & Compliance

SYSTEM ADMIN

The tamper-evident record of every change (who, what, when, before -> after) and the log of every API request. It is written by the database, never by hand, and only System Admins read it.

Who: System Admin (elevated)

Screen: /audit (side menu)

Where: Side menu -> Audit & Compliance. Elevate first.

16.1 Search the audit trail and verify the chain

IMPLEMENTED SYSTEM ADMIN

Purpose. Answer "who changed this, and when?" and prove nothing was altered.

Who can perform it. System Admin while elevated.

Steps.

1. Audit trail: filter by action (e.g. CREDENTIAL_VERIFIED), resource, resource id, priority, dates.
2. Expand a row for the details of the change.
3. Verify audit chain: confirms every entry still links to the one before.

System result. Read only. A broken chain lists the entries concerned.

Approval. None.

Next step. —

Related. 15. Nursing Administration

16.2 Search the request log

IMPLEMENTED SYSTEM ADMIN

Purpose. See every API call — including refused and failed ones — for investigations and support.

Who can perform it. System Admin while elevated.

Steps.

1. Request log: filter by user id, path, method, outcome (2xx, 4xx, 401, 403, 5xx), error code, request id, dates.
2. Expand a row for the browser and session.

System result. Read only; kept 365 days. Request contents and search terms are never stored.

Approval. None.

Next step. —

Related. 20. Troubleshooting

17. Employee self-service

EMPLOYEE

What every nurse can do for themselves: see their profile and keep their phone numbers current, add and renew credentials with evidence, see their own eligibility, contract, shifts and clock-ins, and make personal-data requests.

Who: Every account linked to a staff record

Screen: /my-credentials (side menu)

Where: Side menu -> My Profile, My Credentials, My data; also Contracts, Roster & Scheduling and Attendance show your own records.

Diagram: "Adding a credential" — page 28.

Diagram: "Credential renewal" — page 29.

Diagram: "Personal-data request (PDPL)" — page 69.

17.1 Check your profile and update your phones

IMPLEMENTED EMPLOYEE

Purpose. Keep your contact numbers current so your unit can reach you.

Who can perform it. Every employee, for their own record.

Steps.

1. Open My Profile: job number, name, unit, position, job title, contact e-mail.
2. Under My phone numbers, enter the mobile and emergency contact numbers in international format (+966…).
3. Submit.

System result. Saved. Every other field is maintained by HR.

Approval. None.

Next step. Anything else wrong: ask HR, or make a correction request on My data.

Related. 5. Nurses

17.2 Add a credential and upload its evidence

IMPLEMENTED EMPLOYEE

Purpose. Put your licence or certificate on record so it counts for your eligibility.

Who can perform it. Every employee, for their own credentials.

Before you start.

- The document (PDF, JPEG, PNG or WebP, at most 10 MB) and its details.

Steps.

1. Open My Credentials. At the top: your eligibility and any required credential you are missing (red box).
2. Click Add credential, choose the type, fill in the details (the form follows the type) and Submit. A type marked "Optional for you" (e.g. Passport and Iqama for Saudi nationals, who submit the National ID instead) may be added but is never required.
3. On the new row click Evidence -> Upload evidence and choose the file.

System result. "Submitted — HR will verify it." The credential is Pending verification until HR verifies it.

Approval. HR verifies.

Next step. Watch My Credentials and Notifications.

Common problems.

- Upload refused — Use PDF, JPEG, PNG or WebP under 10 MB; the file must pass the virus scan.

Related. 7. Credentials

Diagram: "Adding a credential" — page 28.

17.3 Renew your credential

IMPLEMENTED EMPLOYEE

Purpose. Submit your renewed licence or certificate before (or after) it expires.

Who can perform it. Every employee, for their own credentials.

Before you start.

- The renewed details with the new expiry date, and the new document.

Steps.

1. My Credentials -> Renew on the credential.
2. Enter the new details and Submit.
3. Evidence -> Upload evidence: the new document.
4. The row shows "Renewal under review".

System result. Your current credential stays valid until its own expiry while HR reviews. If it already expired and the type has grace days, a yellow "Renewal Required — Grace Period Active" banner shows while grace runs.

Approval. HR approves or rejects.

Next step. Notifications tell you the outcome; My Credentials shows the new status.

Related. 7. Credentials · 8. Eligibility

Diagram: "Credential renewal" — page 29.

17.4 Make a personal-data request

IMPLEMENTED EMPLOYEE

Purpose. Exercise your rights under the Personal Data Protection Law.

Who can perform it. Every employee.

Steps.

1. My data -> New request.
2. Type: Access (a copy), Portability (machine-readable), Correction (say what is wrong — 10+ characters), Erasure (identity numbers and scans).
3. Submit, then follow the status; download the package when it is ready (available 30 days).

System result. HR answers within 30 days. Employment records the hospital must keep by law are not erased.

Approval. HR; erasure by a System Admin.

Next step. —

Related. 15. Nursing Administration

Diagram: "Personal-data request (PDPL)" — page 69.

17.5 Your contract, shifts and clock-ins

IMPLEMENTED EMPLOYEE

Purpose. See your own employment, roster and attendance records.

Who can perform it. Every employee.

Steps.

1. Contracts: your contracts and the signed copy.
2. Roster & Scheduling: your next 4 weeks and your home unit's published schedule.
3. Attendance: your clock events of the last 30 days.

System result. Read only.

Approval. None.

Next step. Questions: your supervisor or HR.

Related. 6. Contracts · 11. Roster and scheduling · 12. Attendance

18. Security and your account

EMPLOYEE SUPERVISOR HR ADMIN SYSTEM ADMIN

Keep your account safe: password, two-factor sign-in with an authenticator app and recovery codes, your sign-in e-mail, Telegram, and your sign-in history. System Admins also use elevation here.

Who: Everyone

Screen: /security (side menu)

Where: Your name at the top right -> Change password, Sign-in history, Two-factor sign-in.

> Important: Two-factor sign-in is required for Supervisor, HR Admin and System Admin. Keep the 10 recovery codes on paper, privately; each works once.

> Note: The break-glass account is for emergencies only: it does not use two-factor sign-in and every use alerts hospital leadership. Do not use it for ordinary work or tests.

Diagram: "System Admin elevation" — page 65.

18.1 Change your password

IMPLEMENTED EMPLOYEE SUPERVISOR HR ADMIN SYSTEM ADMIN

Purpose. Replace your password.

Who can perform it. Everyone (not the break-glass account).

Steps.

1. Your name -> Change password.
2. Current password, then the new one (12–72 characters).
3. Save.

System result. Changed; audited.

Approval. None.

Next step. —

Related. 1. Getting started

18.2 Set up two-factor sign-in

IMPLEMENTED EMPLOYEE SUPERVISOR HR ADMIN SYSTEM ADMIN

Purpose. Protect your account with a code from your phone.

Who can perform it. Everyone may; Supervisor, HR Admin and System Admin must.

Steps.

1. Two-factor sign-in -> Set up an authenticator app (required roles are taken there at sign-in).
2. Scan the QR code with Microsoft or Google Authenticator; name it clearly.
3. Type the 6-digit code to confirm.
4. Write down the 10 recovery codes shown once.

System result. Every sign-in asks for a code. New recovery codes replace the old ones; turning it off is possible only where your role does not require it.

Approval. None.

Next step. —

Common problems.

- Lost phone — Sign in with a recovery code and set up the new phone, or ask HR to Reset two-factor.

Related. 15. Nursing Administration

18.3 Change your sign-in e-mail

IMPLEMENTED EMPLOYEE SUPERVISOR HR ADMIN SYSTEM ADMIN

Purpose. Sign in with a different e-mail address.

Who can perform it. Everyone (not break-glass). HR can start it for you from Accounts.

Steps.

1. Two-factor sign-in -> Sign-in e-mail -> Change e-mail.
2. The new address and your current password.
3. Open the link sent to the new address within 30 minutes.

System result. After confirmation you sign in with the new address and all sessions are signed out. Until then nothing changes; Cancel the change stops it.

Approval. None.

Next step. —

18.4 Connect Telegram

PARTIALLY IMPLEMENTED EMPLOYEE SUPERVISOR HR ADMIN SYSTEM ADMIN

Telegram is simulated in the demonstration system until the hospital's bot is set up.

Purpose. Get a short Telegram message when a notification is waiting (never the details).

Who can perform it. Everyone.

Steps.

1. Two-factor sign-in -> Telegram -> Connect Telegram.
2. Follow the link or scan the QR code in Telegram.

System result. Telegram shows as connected; you can disconnect at any time.

Approval. None.

Next step. —

Related. 13. Notifications

18.5 Check your sign-in history

IMPLEMENTED EMPLOYEE SUPERVISOR HR ADMIN SYSTEM ADMIN

Purpose. Spot a sign-in that was not you.

Who can perform it. Everyone, own sessions only.

Steps.

1. Your name -> Sign-in history.
2. Read sign-in time, last active, address, browser and status ("This session", Active, Ended).

System result. Read only.

Approval. None.

Next step. A session you do not recognise: change your password and tell your administrator.

---

19. How the hospital system works

EMPLOYEE SUPERVISOR HR ADMIN SYSTEM ADMIN

The complete flow, from the hospital's master data to the nurse on the ward. Each stage depends on the one before it: a nurse with no approved contract or no verified required credential is ineligible, and an ineligible nurse cannot be published on the roster.

Who: Everyone

Diagram: "How the hospital system works" — page 5.

Diagram: "Onboarding a nurse" — page 15.

Diagram: "How eligibility is decided" — page 40.

Diagram: "Building and publishing a roster" — page 52.

Stage by stage

Stage	Who	Where	Done when
1. Departments, units, beds	HR (hospital-wide)	Workforce, or Hospital baseline import	Units and beds match the hospital
2. Positions	HR (hospital-wide)	Workforce -> Positions	Schedulable flags are right
3. Credential catalogue	HR + a second approver	Credentials -> Catalog / Categories	Types approved
4. Requirements	HR	Credentials -> Requirements	Every unit's policy entered
5. Nurse onboarded	HR	Nurses -> Onboard employee	Employee and Draft contract exist
6. Contract approved	HR + a second HR person	Contracts	Approved or Active
7. Credentials and evidence	Nurse (or HR)	My Credentials	Recorded with documents
8. Verification / SCFHS	HR	Credentials -> Review queue	Valid or Expiring soon
9. Eligibility	System	Eligibility	ELIGIBLE (or grace / warning)
10. Coverage targets	HR	Workforce -> Coverage targets	Each shift has a target
11. Roster published	Supervisor	Roster & Scheduling	Week published
12. Attendance	Badge system	Attendance	Clock-ins match the roster
13. Monitoring and notices	System -> everyone	Nursing KPIs, Notifications	Each notice acted on
14. Audit and governance	System Admin	Audit & Compliance	Chain verified

20. Troubleshooting

EMPLOYEE SUPERVISOR HR ADMIN SYSTEM ADMIN

Common questions and what to do. When reporting a problem, give the page, what you clicked, the exact message and the time — the administrators can find the request in the log.

Who: Everyone

Questions

Question	Answer
Why can't I see a nurse?	The nurse is outside your scope, or the record was deleted. Supervisors see only their units.
Why is a nurse ineligible?	Open Eligibility and read the red reasons; fix the source record (see Eligibility -> Resolve an ineligible nurse).
Why is a menu item missing?	Your role does not include it. System Admins: elevate first.
Why is there no Approve button?	You created or submitted the item; a different administrator must approve.
The nurse cannot be added to a shift	Not eligible on that date, not in this home unit, or already on a shift that day.
Published shifts went back to draft	A nurse stopped being eligible; re-staff the shift.
My upload is refused	PDF, JPEG, PNG or WebP (contracts: PDF), at most 10 MB, and it must pass the virus scan.
I cannot open a document	Only clean files open, only for the holder and HR; supervisors never see documents. The link is single-use: click again.
Send invitation fails	E-mail must be on, the nurse needs an approved contract and a valid contact e-mail not used by another account.
Sign-in is refused or paused	Wrong password 5 times pauses the account for up to 15 minutes. Use Forgot password? (staff) or ask HR.
I lost my phone	Use a recovery code, or ask HR to reset two-factor sign-in.
ELIGIBLE but nothing was checked	The unit has no requirements configured (grey note): HR must enter the unit's policy.
KPI looks wrong	Only published shifts of nurse positions count; check beds, critical areas, patient-care areas, inpatient beds and Nurse (KPI) positions in Workforce.
"Someone else saved a change to this record"	Another person saved the same record after you opened it, so your change was not saved (theirs would have been lost). The record has been reloaded: check their change, then make yours again. This applies to employees (including your own phone numbers), units and their beds, departments, positions, the master lists (Rank/Grade, specialties, regions and cities, facilities, contract types) and user accounts.
"The application has been updated"	A new version was released while the page was open. The page normally reloads by itself; if this message shows, press Reload.
Attendance shows everyone missing	The badge system is not connected yet; real clock-ins will appear once it is.

Messages you may see

Message contains	Meaning
SCOPE_NOT_COVERED / outside your assigned scope	The record is in a unit or department you do not cover
SELF_… (own record, own contract, own credential)	Separation of duties: someone else must do it
…APPROVAL… / different administrator	A second person must approve
EMAIL_OFF / e-mail is not configured	E-mail is switched off on this system
DOCUMENT_NOT_CLEAN	The file did not pass scanning
TRANSITION_NOT_ALLOWED	That action does not apply to the record's current status

21. Quick reference

EMPLOYEE SUPERVISOR HR ADMIN SYSTEM ADMIN

Statuses, codes and limits on one page.

Who: Everyone

Limits and timings

Item	Value
Password	12–72 characters
Sign-in pause	5 wrong attempts per account, or 20 per network, within 15 minutes
Invitation link	72 hours, works once
Password reset link	30 minutes (self-service); 24 hours (sent by HR)
Sign-in e-mail change link	30 minutes
Document upload	PDF / JPEG / PNG / WebP, at most 10 MB; contracts PDF only
Document link	Single-use, 60 seconds
Credential "Expiring soon"	Within 60 days of expiry
Grace days	0–90 per credential type (hospital policy)
Emergency waiver	One credential type, at most 72 hours
Role expiry	Supervisor <= 90 days; HR Admin and System Admin <= 365 days
System Admin elevation	1–4 hours
Shifts (Riyadh time)	Morning 07:00–15:00, Evening 15:00–23:00, Night 23:00–07:00
Missing clock-in	30 minutes after the start; alerts every 15 minutes
Personal-data request	Answered within 30 days; package available 30 days
Request log kept	365 days

Daily jobs (Riyadh time)

Time	Job
00:05	Daily transition: contract and credential statuses by date, grace and transition deadlines
02:30 / 02:40	Request-log and simulated-Telegram purges
03:00	Consistency audit: stored eligibility checked against the engine
04:30	Document vault check
05:00	SCFHS sync (nightly licence checks)
06:00	Expiry scan: credential and contract reminders
Every 15 minutes	Attendance alerts

Status colours

Colour	Means
Green	Valid, Active, Eligible, Present
Gold / amber	Expiring soon, grace, policy warning, pending
Orange	Pending approval, shortage
Red	Expired, Ineligible, Missing, blocking reason

Colour	Means
Grey	Note, inactive, not set
